Thought-provoking perspectives from experts in library serials! *Roaring Into Our 20's: NASIG 2005* presents leading authorities in library serials providing their unique perspectives on the challenges of serials collection development and management, as well as their promising visions for the future. Marshall Keys, Regina Romano Reynolds, Steve Shadle, Carol Hixson, Paul Weiss, and a host of other top experts in serials gathered as presenters for the milestone twentieth anniversary conference of the North American Serials Interest Group (NASIG) held in May 2005 in Minneapolis, Minnesota. The latest issues and thought-provoking strategies are explored, giving librarians of all types a firm grasp of the newest products and most effective tactics to best manage serials today—and tomorrow. The conference itself consisted of preconference programs, vision sessions, strategy sessions, and tactics sessions not only to provide goals for the future, but also to examine ways to help librarians become more effective in handling the constantly evolving challenges of serial management. *Roaring Into Our 20's: NASIG 2005* discusses a broad selection of topics of crucial interest, including electronic resources, vendors, financial issues, the development of new products and services and other topics exploring the bright and challenging future of library serials. Several chapters include tables and figures to enhance the clarity of ideas. Topics in *Roaring Into Our 20's: NASIG 2005* include: FRBR (Functional Requirements for Bibliographic Records) ISSN revision cross-provider search institutional depositories e-journal management OpenURL Big Deals cancellation projects RSS the AACR3 development process *Roaring Into Our 20's: NASIG 2005* is a horizon-expanding collection that is perfect for librarians, publishers, and commercial vendors interested in the future of serial publication.

*Business Database Technology* provides essential knowledge of database technology for four-year college/university business students who study information technology and data resource management. Students will learn basic data structure techniques in databases, relational database model, design and implementation of relational databases, normalization, SQL, physical relational database design techniques, database administration, relational databases in computer networks, data warehouses, overview of OLAP (online analytical processing), and introduction to NoSQL databases.

Readers gain a solid foundation in database design and implementation with the practical and easy-to-understand approach in *DATABASE SYSTEMS: DESIGN, IMPLEMENTATION, AND MANAGEMENT, 12E*. Filled with diagrams, illustrations, and tables, this market-leading text provides in-depth coverage of database design. Readers learn the key to successful database implementation: proper design of databases to fit within a larger strategic view of the data environment. Renowned for its clear, straightforward writing style, this text provides an outstanding balance of theory and practice. Updates include the latest coverage of cloud data services and a new chapter on Big Data Analytics and NoSQL, including related Hadoop technologies. In addition, new review questions, problem sets, and cases offer multiple opportunities to test understanding and develop useful design skills.
