Engineering asset management encompasses all types of engineered assets including built environment, infrastructure, plant, equipment, hardware systems and components. Following the release of ISO 5500x set of standards, the 9th WCEAM addresses the hugely important issue of what constitutes the body of knowledge in Engineering Asset Management. Topics discussed by Congress delegates are grouped into a number of tracks including strategies for investment and divestment of assets, operations and maintenance of assets, assessments of assets condition, risk and vulnerability, technologies and systems for management of asset, standards, education, training and certification. These proceedings include a sample of the wide range of topics presented during the 9th World Congress on Engineering Asset Management in Pretoria South Africa 28 1 31 October, 2014 and complements other emerging publications and standards that embrace the wide ranging issues concerning the management of engineered physical assets.

Supply Chain Management (SCM) has always been an important aspect of an enterprise's business model and an effective supply chain network is essential to remaining competitive in a global environment. By properly managing the flow of goods and services, businesses can operate more efficiently while managing most of the workload behind-the-scenes. The Handbook of Research on Global Supply Chain Management is an in-depth reference source that covers emerging issues and relevant applications of information pertaining to supply chain management from an international perspective. Featuring coverage on topics such as the global importance of SCMs to strategies for producing an effective supply chain, this comprehensive publication is an essential resource for academics and business professionals alike interested in uncovering managerial insight and logistics solutions.

Throughout the last several decades , Korean companies have entered the world markets in a wide range of manufacturing industries with great success. How did they achieve this exceptional performance? This book uncovers the secret of their performance through a comprehensive analysis of the Korean management system. It explains to an international audience how it has developed, why it works so well, and what non-Koreans can learn from it. The book analyzes the management of Korean firms from three different perspectives. First, a historical perspective is applied by showing how Tiger Management has emerged and how it has been continuously advanced over the last 50 years. The breathtaking stories of how Korean companies, seemingly coming from nowhere, have challenged their Western and Japanese competitors on the world markets are told. Second, the cornerstones of Tiger Management are analyzed from a functional viewpoint, showing that the success of Korean companies rests on a smart combination of business strategy, leadership, and human resource management practices. Finally, the present and future of Tiger Management is discussed by showing how Korean companies have adapted to changes in their business environment at home and abroad, and what non-Korean companies can learn from their Korean rivals. The book gives an up-to-date analysis of Korean management practices from a global perspective. It identifies the success factors of Korean companies: long term, aggressive and persisting business planning, speed, flexibility, strong leadership, strong teamwork, and high investment into human skills and capabilities. It illustrates how these management practices complement each other and provides non-Korean companies with signposts how they can adopt them.

One of the most important features of China's economic emergence has been the role of foreign investment and foreign companies. The importance goes well beyond the USD 1.6 trillion in foreign direct investment that China has received since it started opening its economy. Using the tools of economic impact analysis, the author estimates that around one-third of China's GDP in recent years has been generated by the investments, operations, and supply chains of foreign invested companies. In addition, foreign companies have developed industries, created suppliers and distributors, introduced modern technologies, improved business practices, modernized management training, improved sustainability performance, and helped shape China's legal and regulatory systems. These impacts have helped China become the world's second largest economy, its leading exporter, and one of its leading destinations for inward investment. The book provides a powerful analysis of China's policies toward foreign investment that can inform policy makers around the world, while giving foreign companies tools to demonstrate their contributions to host countries and showing the tremendous power of foreign investment to help transform economies.

Production and innovation activities are being re-distributed across the world. The BRICS countries (Brazil, Russia, India and China) are proving the major engine of global growth, being less impacted by the financial crisis than developed economies or able to recover more quickly. Asia in the Global ICT Innovation Network takes a close look at the information and communication technologies (ICTs) landscape, not only in two BRICS countries, India and China, but also in South Korea and Taiwan. The book documents the size of the ICT sector for each of the selected countries, and assesses their R&D expenditure and its place in the international innovation network. The selected countries play a major role in shifting patterns of international trade and global value chains. The countries offer different historical profiles, with reforms dating back from the nineties for "China and earlier policies for the "dragons", with later reforms focusing on IT. The book accounts for their specificity, and emphasises the fact that the four countries have achieved impressive results in terms of economic growth. The ICT sector was a major contributor to this growth and led a pioneering role for other sectors. This title consists of three parts: ICT in emerging economies, covering China and India; the return of the dragons, covering South Korea and Taiwan; and Network knowledge and trade, covering regional networks of R&D centres, India as an S&T cooperation partner, Asian countries in the global production network, and Asia in the process of internationalisation of ICT and R&D. Provides a well-supported look at the ICT sector in Asia, an area where extant literature consists mostly in a scattering of articles in various and heterogeneous journals Focuses on innovation Speaks to a growing interest in the role of emerging countries in ICT innovation

This multi-volume set focuses on a key region of the world which contains four of the biggest emerging economies, a large number of highly dynamic small- and medium-sized emerging economies, and one of the leading advanced industrial countries. It is a region which contains some of the biggest hydrocarbon and mineral deposits in the world, and some of the most energy- and metal-hungry economies in the world. With half the world's population, it is one of the most dynamic regions of the globe in terms of population movement, providing a key focus of foreign investment, both inwards and outwards, with a high degree of technological dynamism. The region plays a central role in the industrial supply networks of the globe.In four volumes, focusing on, respectively, foreign investment, innovation, energy and migration, the set focuses on each of the main elements in the production system in turn: capital, innovation, raw materials and labour. Volume 1 studies patterns of interchange of financial and direct investment within the region, focusing on governance, the development of supply chains, and technology transfer. In Volume 2, the technology theme becomes dominant, with a special focus on digital technology. It includes technical issues like mobile communications standardisation, developmental dimensions, including the role of clusters and science parks, and political economy issues like the rise of techno-nationalism. Volume 3 turns to energy issues: not just issues of supply and demand, but also key problems of climate change, security and sustainability across the Eurasian and Asian landmass. Volume 4 presents the human dimension, looking at people in movement, as workers, citizens, men, women, or colonisers. Among the key issues discussed are the migration from country to town in China, the 'greying' of countries like Japan, the effect of war on migration, marriage migration, human trafficking and the depopulation of the Russian Far East.The set is a must-have for anyone keen to understand the region whose manufacturing core can be described, without exaggeration, as the "workshop of the world" of the twenty-first century.

This textbook discusses the most important theories of internationalization, including Product Life-Cycle, Internalization, Location, Eclectic Paradigm, Uppsala, Network, and International New Venture concepts. These models are grounded to a considerable extent in the Transaction Cost Theory and the Resource-Based View as explained and illustrated in the book. Relevant market entry strategies, such as franchising, contract manufacturing, joint ventures, and others are explained and categorized in light of crucial determinants of international business decision making: hierarchical control of operations, the firm's proximity to the foreign market, the investment risk, and the factor of time. What makes this textbook novel and unique? Its framework combines theories and market entry strategies: each topic is applied to authoritative, real-life business case studies. Complex issues are explained in a manner that results in understanding. Various illustrations and tables help the reader comprehend the point being discussed. The case study focus on Asian firms delivers interesting insights into modern high-technology industries and changing global business dynamics. Market Entry Strategies serves as a vital source for internationally oriented bachelor, master, and MBA programs with strategy, marketing, and management lecture modules. Consequently, this publication is highly recommended for students and scholars; but it is also useful for business practitioners seeking to gain competitive advantages in international business. About the Author Mario Glowik teaches Bachelor, MBA and Master courses in Strategic management, International management, Strategic management in China and Europe, and International and Asian business at Berlin School of Economics and Law in Berlin.
