This book focuses on subarachnoid hemorrhage (SAH), describing in detail the neurophysiology, anatomy, epidemiology, grading, anesthesia management, coiling and interventional treatment of this dangerous disease. Written by leading international experts, it highlights the state-of-the-art techniques for the diagnosis and treatment (non-surgical and surgical) of SAH and the clinical variations. It also examines the reliability of the new techniques versus the standard clinical methods to predict problems related to SAH and its recent diagnosis and management. The book starts with a brief discussion of the epidemiology of SAH, cerebral circulation, anatomy of brain blood vessels and neurophysiology related to this fatal disease. Then, in the following chapters it covers grading of subarachnoid hemorrhage, anesthesia management of SAH, treatment, subarachnoid hemorrhage coiling and radiological intervention. Lastly, it explores surgical treatment of intracranial aneurysms in more detail, and addresses complications, critical care management and headache in SAH, traumatic SAH and prognosis. Featuring numerous images, tables, schema, illustrations and videos, the book is intended for junior and senior anesthesiologists, neuroscientists, intervention radiologists, intensivists and neurosurgeons.

The U.S. Navy is ready to execute the Nation's tasks at sea, from prompt and sustained combat operations to every-day forward-presence, diplomacy and relief efforts. We operate worldwide, in space, cyberspace, and throughout the maritime domain. The United States is and will remain a maritime nation, and our security and prosperity are inextricably linked to our ability to operate naval forces on, under and above the seas and oceans of the world. To that end, the Navy executes programs that enable our Sailors, Marines, civilians, and forces to meet existing and emerging challenges at sea with confidence. Six priorities guide today's planning, programming, and budgeting decisions: (1) maintain a credible, modern, and survivable sea based strategic deterrent; (2) sustain forward presence, distributed globally in places that matter; (3) develop the capability and capacity to win decisively; (4) focus on critical afloat and ashore readiness to ensure the Navy is adequately funded and ready; (5) enhance the Navy's asymmetric capabilities in the physical domains as well as in cyberspace and the electromagnetic spectrum; and (6) sustain a relevant industrial base, particularly in shipbuilding.

This revised edition covers all aspects of public health informatics and discusses the creation and management of an information technology infrastructure that is essential in linking state and local organizations in their efforts to gather data for the surveillance and prevention. Public health officials will have to understand basic principles of information resource management in order to make the appropriate technology choices that will guide the future of their organizations. Public health continues to be at the forefront of modern medicine, given the importance of implementing a population-based health approach and to addressing chronic health conditions. This book provides informatics principles and examples of practice in a public health context. In doing so, it clarifies the ways in which newer information technologies will improve individual and community health status. This book's primary purpose is to consolidate key information and promote a strategic approach to information systems and development, making it a resource for use by faculty and students of public health, as well as the practicing public health professional. Chapter highlights include: The Governmental and Legislative Context of Informatics; Assessing the Value of Information Systems; Ethics, Information Technology, and Public Health; and Privacy, Confidentiality, and Security. Review questions are featured at the end of every chapter. Aside from its use for public health professionals, the book will be used by schools of public health, clinical and public health nurses and students, schools of social work, allied health, and environmental sciences.
