This indispensable book describes lubricant additives, their synthesis, chemistry, and mode of action. All important areas of application are covered, detailing which lubricants are needed for a particular application. Laboratory and field performance data for each application is provided and the design of cost-effective, environmentally friendly technologies is fully explored. This edition includes new chapters on chlorohydrocarbons, foaming chemistry and physics, antifoams for nonaqueous lubricants, hydrogenated styrene–diene viscosity modifiers, alkylated aromatics, and the impact of REACH and GHS on the lubricant industry.

In recent years, a renewed focus on agriculture has been evident in policy and development agendas for the African continent, yet little knowledge has been generated on the interlinkages of production, agroindustry and markets, as well as the potentials and challenges for developing these. This publication analyzes the challenges, the potential and opportunities of African agribusiness in the current period of dramatic changes in global agro-industrial markets, and builds a case for agribusiness development as a path to Africa's prosperity. Written by international experts, from agribusiness practitioners, to academic experts and UN technical agencies, this volume fills what the United Nations Industrial Development Organization perceived as a significant gap in knowledge concerning these issues.

Note for the electronic edition: This draft has been assembled from information prepared by authors from around the world. It has been submitted for editing and production by the USDA Agricultural Research Service Information Staff and should be cited as an electronic draft of a forthcoming publication. Because the 1986 edition is out of print, because we have added much new and updated information, and because the time to publication for so massive a project is still many months away, we are making this draft widely available for comment from industry stakeholders, as well as university research, teaching and extension staff.

The Encyclopedia of Food and Health provides users with a solid bridge of current and accurate information spanning food production and processing, from distribution and consumption to health effects. The Encyclopedia comprises five volumes, each containing comprehensive, thorough coverage, and a writing style that is succinct and straightforward. Users will find this to be a meticulously organized resource of the best available summary and conclusions on each topic. Written from a truly international perspective, and covering of all areas of food science and health in over 550 articles, with extensive cross-referencing and further reading at the end of each chapter, this updated encyclopedia is an invaluable resource for both research and educational needs. Identifies the essential nutrients and how to avoid their deficiencies Explores the use of diet to reduce disease risk and optimize health Compiles methods for detection and quantitation of food constituents, food additives and nutrients, and contaminants Contains coverage of all areas of food science and health in nearly 700 articles, with extensive cross-referencing and further reading at the end of each chapter

Food quality is becoming an ever-increasing important feature for consumers and it is well known that some food crops are perishable and have a very short shelf and storage life. An effective quality assurance system throughout the handling steps between harvest and retail display is essential to provide a consistently good quality supply of fresh food crops to the consumers and to protect the reputation of a given marketing label. Food manufacturing companies all over the world are increasingly focussing on quality aspect of food including minimally processed food to meet consumer demands for fresh-like and healthy food products. To investigate and control quality, one must be able to measure quality-related attributes. Quality of produce encompasses sensory attributes, nutritive values, chemical constituents, mechanical properties, functional properties and defects. Successful postharvest handling of crops requires careful coordination and integration of the various steps from harvest operations to consumer level in order to maintain the initial product quality. Maturity at harvest is one feature of quality of perishable products, it has great influence on their postharvest behavior during marketing. Safety assurance can be part of quality assurance and its focus on minimizing chemical and microbial contamination during production, harvesting, and postharvest handling of intact and fresh-cut of commodities. Essentially, electromagnetic (often optical) properties relate to appearance, mechanical properties to texture, and chemical properties to flavor (taste and aroma).

Argentina has reformed its public finance system and reversed years of economic decline and deficit spending. This study recommends policy options to speed the already impressive progress. These options would expand the ambitious reform program already under way. This study shows how to sustain balanced public finances over the medium term. It describes ways to sustain price stability and economic growth while providing a cushion against unexpected downturns. Also examined are ways to improve social services while reducing the size of government. Researchers discuss key reforms that could boost the fiscal surplus by as much as 1.4 percent of gross domestic product. They look at ways to build tax revenues, reduce provincial finances, and make social security more equitable. They review methods to cut defense spending and revive a moribund education system. Additional policy options offered are reforms for housing and welfare programs and pension fund investments. The study suggests ways to improve the legal framework for a stronger central bank. Also reviewed are ways to eliminate unnecessary administrative agencies and to privatize public enterprises. The government's new health insurance program is examined. This program offers universal coverage. It lets contributors choose providers and includes subsidies for those who can't pay. It also requires a minimum package of health care at a set price.
