New interest in gene expression as related to nutrition and advances in the field of macronutrients has made the latest nutrition research intriguing. **Advanced Nutrition: Macronutrients** adopts an integrated approach to the understanding of macronutrient nutrition. It provides scientific

foundations of the current findings on energy balance, protein need, gene expression, and carbohydrate and lipid use, and maintains emphasis on the biochemical and physiological basis for nutrient need.

This text presents nutrition at the biochemical and metabolic level and covers the biochemistry of vitamins, minerals, and energy nutrients. Written specifically for the advanced nutrition course, this text continues to be the hallmark text used in the majority of courses across the country due to its selected topic coverage at the appropriate level.

While written from a nutritional sciences perspective, *Advanced Nutrition and Regulation of Metabolism* is a reference source that emphasizes regulation of proteins and gene expression. The focus is on the function of nutrients, how function relates to deficiency and its symptoms, how both of these relate to assessment, and how this is achieved during the fed-fasted cycle. After reviewing cell biology and basic biological concepts, the book discusses digestion and absorption, carbohydrates, lipids, proteins, water-soluble vitamins, fat-soluble vitamins, and minerals. Students learn how these are all structured and absorbed, become familiar with the nomenclature, and study their impact on metabolism, as well as other essential biological functions. Each chapter includes specific objectives and outcomes to guide student learning, reflection, discussion, comprehension questions, and an application opportunity. Designed for students who are already familiar with introductory and intermediate nutritional sciences, *Advanced Nutrition and Regulation of Metabolism* assumes that readers have a background in cell biology, biochemistry, and physiology. The book is well-suited to advanced nutritional sciences courses, as well as some classes in animal science, kinesiology, genetics, and biochemistry. Kevin L. Schalinske earned his Ph.D. in nutritional sciences at the University of Wisconsin, where he also completed a post-doctoral fellowship. Dr. Schalinske is now a professor in the Department of Food Science and Human Nutrition at Iowa State University. His research interests include the impact of nutritional and hormonal factors on folate and methyl group metabolism, particularly as they impact health and disease. He has received funding from numerous sources including the National Institutes of Health, the American Diabetes Association, and the American Heart Association. Dr. Schalinske also serves as an associate editor for *The Journal of Nutrition*.
