Aging in Rural Places: Programs, Policies, and ...
While rural areas offer many benefits, supporting aging in place may require more careful planning and coordination than in other settings. Nearly 90% of older adults would like to remain in their homes for as long as possible. However, the physical changes brought on by aging — vision and hearing changes, cognitive decline, mobility limitations, and self-care difficulties, among others — can impact older adults' ability to age in place.

Aging in Place in Rural Communities – RHHub Aging in ...
Research documents that rural elders are poorer, live in less adequate housing, and have far fewer health and service options available to them than their urban counterparts, yet there is a critical lack of current and detailed information on the problems facing rural elders and on the professional practices that serve this population.

Aging in Rural Places - springerpub.com
Aging in Rural Areas: Rural areas present a distinct challenge to providing services to individuals who are visually impaired and blind, and especially to those who are older. I have had the experience of working in an urban area and in a very rural area. The barriers to individuals with visual impairments in rural areas seem to far exceed those of individuals living in urban areas.

Rural communities are ageing faster than other parts of the UK with approximately half of the rural population aged over 45, compared with 36 per cent in major urban areas.

The Challenges of Rural Living for Older People
Rural Aging. The nation's population is aging, and with that change comes increased healthcare needs. According to the Centers for Disease Control and Prevention report, The State of Aging and Health in America 2013, the population 65 years and older is expected to double over the next 25 years, due to longer life spans and the large number of baby boomers reaching retirement age.

This book investigates sociological, demographic and geographic aspects of aging in rural and nonmetropolitan areas of the United States. Population aging is one of the most important trends of the 20th and 21st centuries, and it is occurring worldwide, especially in more developed countries such as the United States. Population aging is more rapid in rural than urban areas of the U.S. In 2010, 15 percent of the nonmetropolitan compared to 12 percent of the metropolitan population were 65 years of age and older. By definition rural communities have smaller sized populations, and more limited healthcare, transportation and other aging-relevant services than do urban areas. It is thus especially important to study and understand aging in rural environments. Rural Aging in 21st Century America contributes evidence-based, policy-relevant information on rural aging in the U.S. A primary objective of the book is to improve understanding of what makes the experience of rural aging different from aging in urban areas and to increase understanding of the aged change the nature of rural places. The book addresses unique features of rural aging across economic, racial/ethnic, migration and other structures and patterns, all with a focus on debunking myths about rural aging and to emphasize opportunities and challenges that rural places and older people experience.

This text provides the critical dimensions of growing old in rural environments. Prominent researchers explore issues related to life conditions, diversity, services, and public policies for rural elders. A comprehensive overview of the field, this volume addresses the major contemporary themes that dominate rural living today. Special attention is given to populations such as women, African Americans, the oldest old, and the poor, generally considered at greater risk of poor health, social isolation, and economic vulnerability.

This important book addresses a growing international interest in 'age-friendly' communities. It examines the conflicting stereotypes of rural communities as either idyllic and supportive or isolated and bereft of services. Providing detailed information on the characteristics of rural communities, contributors ask the question, 'good places for whom'? The book extends our understanding of the intersections of rural people and places across the adult lifecycle. Taking a critical human ecology perspective, authors trace lifecourse changes in community and voluntary engagement and in the availability of social support. They illustrate diversity among older adults in social inclusion and in the types of services that are essential to their well being. For the first time, detailed information is provided on characteristics of rural communities that make them supportive to different groups of older adults. Comparisons between the UK and North America highlight similarities in how landscapes create rural identities, and fundamental differences in how climate, distance and rural culture shape the everyday lives of older adults. Rural ageing is a valuable resource for students, academics and practitioners interested in communities, rural settings and ageing and the lifecourse. Rich in national profiles and grounded in the narratives of older adults, it provides theoretical, empirical and practical examples of growing old in rural communities never before presented.

How are the elderly who reside in rural areas affected by the social and physical context in which they live? Aging in Rural America addresses this question by pulling together the latest research and findings on rural older persons. Leading scholars review the latest information, highlight the controversies, and examine the methodological and substantive issues in current research. Following an introductory section that looks at the demographic characteristics of the rural elderly, the contributors survey issues related to resource development and look at the rural elderly in terms of their social needs, their economic contributions to communities, the development of senior centers as community focal points, and the need for transportation alternatives. Physical and mental health issues are also explored in terms of social support and psychological consequences, health promotion, and mental service dilemmas. Finally, social supports such as formal long-term care, home and community care, informal supports, and family relations are examined. Aging in Rural America is of major interest to researchers, policymakers, and advanced students in the area. "This is a comprehensive collection characterized by high quality original essays and current data. . . . Strongly recommended for all programs in gerontology." --Choice "Aging in Rural America, edited by C. Neil Bull, provides an excellent blend of review papers and original empirical studies examining aspects of aging in rural environments. The volume is an informative reader... For those just beginning an exploration of rural aging, the volume will be especially useful because contributors have paid attention to construct definition. --Contemporary Gerontology "This well-organized collection of essays leaves little to criticize as it addresses the major research issues and focuses on a clearly defined area of research. . . . This volume admirably covers a broad range of salient research topics, with several chapters discussing services for the elderly." --Rural Development Perspectives

Learn the skills you need to work with geriatric populations in rural areas! Gerontological Social Work in Rural Towns and Communities provides a range of intervention and community skills aimed precisely at the needs of rural elders. This book fills a gap in the literature by focusing on the specific practice concerns for social workers assisting older adults in rural areas, including the aging experience, social worker skills, professional functions, working with special populations, and health and long-term care concerns. This valuable resource will benefit social workers, gerontologists, allied health professionals in rural areas, health and human services administrators and managers. Gerontological Social Work in Rural Towns and Communities explores the challenges social workers need to overcome when working with the elder community in rural areas. This book ' s significance to social workers will only increase as more adults choose to live and grow old away from the cities. Experts in the field suggest strategies to overcome barriers in planning and providing services such as: a longer distance for the elderly to travel to use social service centers a narrower range of available services in the local area increased poverty levels for the elderly a stronger dependency by elderly on family rather than public assistance This book is divided into five sections: Rurality and Aging—introduces the concept of rurality and examines the demographics of aging from a rural perspective Practice Dimensions of Social Work with Rural Elders—includes clinical practice models, intervention and advocacy techniques, program planning, and marketing approaches Special Populations—gives attention to four special population groups: indigenous elders, African-American older adults, elderly Latinos, and disabled elders Special Issues Pertaining to Rural Elders—covers five essential issues for rural gerontological social workers: health promotion, older workers and retirement preparation, aging in place, specialized housing, and ethical practice Training and Policy Recommendations—future training and education recommendations for social workers are explored, as well as service capacity building, the aging network, and the future of long-term care While a variety of theoretical perspectives are explored in Gerontological Social Work in Rural Towns and Communities, the book ' s empowerment orientation and strengths-based approach will enhance your abilities to improve quality of life for elderly individuals in rural communities. Each chapter contains a comprehensive review of the literature on the subject it addresses, and several chapters include tables and graphs to further establish their revealing empirical findings. An appendix provides additional sources to turn to for more information.

Major concepts. Aging-in-place and political economy of aging in a rural area.

This book examines trends in ageing societies and urban development before assessing the impact of ageing populations on urban areas and strategies for policy and governance. It includes 9 case studies.

"This book discusses the aging populations in rural Japan. The plan of the book is as follows: In Chapter 1, we describe how rural Japan has changed socially and demographically. We explain how rural depopulation has led to political consolidation, and how the welfare system in Japan is placing more responsibility and autonomy on the municipalities. Some rural towns in Japan, such as Kawanehonch , are actively responding to the demographic challenges initiated by municipal governments that have the advantage of developing unique programs reflecting the voices of local residents. Chapter 2 describes Kawanehonch , explains how it became a rural depopulated town, and discusses why the town provides an important example to understand and discuss rural aging comparatively. In Chapter 3, we review theoretical frameworks (collective efficacy theory and social capital) to understand the inseparability of successful aging from the quality of neighborhoods and communities. We explain our research methods in Chapter 4. In Chapter 5, we examine Kawanehonch with secondary data. Chapter 6 summarizes the findings based on observations of activities provided for the elderly in this town, and Chapter 7 sheds light on rural aging through the eyes and words of its leaders. Chapter 8 presents our findings from our survey of elders participating in two community programs developed locally and specifically for them. Finally, in Chapter 9, we discuss the possibility of net immigration of older adults to Kawanehonch , and Chapter 10 includes discussions on challenges in rural depopulation and healthy aging"--

This book examines the well-being of China's rural elderly in the context of a rapidly aging population. Traditional sources of support are coming under strain with population aging and the migration of youth, making it imperative that pension coverage be extended to the rural population.
