More than 40 years after her death, the legend of Maria Callas, "La Divina Assoluta," remains unsurpassed. Much has been written about her sensational opera career and fraught private life, from her definitive mastery of iconic opera roles to her love affairs and tantrums. The prototype for the 20th century celebrity diva, Callas emblemizes the cliché of tormented talent – genius in the ring with catastrophe. Her extraordinary voice, in particular, has become an object of cult-like adoration and cultural significance almost with a life of its own: as fetish object, as sophisticated sonic signifier, and most recently, as the lifeblood for a Callas hologram. Such adoration is not without consequences. When Callas is transformed into a vessel for such transcendent magic, it overshadows what is perhaps her most superhuman ability – the masterful technique she deployed to

shape and craft her astounding instrument. Singing bodies are working bodies, enacting an intimate and complex form of artistic labor and cultural signification. Using one of Callas's first recital recordings from 1954, this book envisions each aria as a lens to examine various aspects of vocalization and cultural reception of the feminized voice in both classical and pop culture, from Homer's Sirens to Star Trek. With references to works by Marina Abramovic, Charles Baudelaire, Michel Chion, Wayne Koestenbaum, Greil Marcus, and Farah Jasmine Griffin, as well as films by Pier Paolo Pasolini, Jonathan Demme, and Rainer Werner Fassbinder, each chapter explores phenomena unique to the singing voice, including the operatic screaming point, the politics of listening, and the singing simulacrum.

Awarded a 2014 Science Fiction and Technoculture Studies Prize Honourable Mention. This book explores the creation and use of artificially made humanoid servants and servant networks by fictional and non-fictional scientists of the early modern period. Beginning with an investigation of the roots of artificial servants, humanoids, and automata from earlier times, LaGrandeur traces how these literary representations coincide with a surging interest in automata and experimentation, and how they blend with the magical science that preceded the empirical era. In the instances that this book considers, the idea of the artificial factotum is connected with an emotional paradox: the joy of self-enhancement is counterpoised with the anxiety of self-displacement that comes with distribution of agency. In this way, the older accounts of creating artificial slaves are accounts of modernity in the making—a modernity characterized by the project of extending the self and its powers, in which the vision of the extended self is fundamentally inseparable from the vision of an attenuated self. This book discusses the idea that fictional, artificial servants embody at once the ambitions of the scientific wizards who make them and society's perception of the dangers of those ambitions, and represent the cultural fears triggered by independent, experimental thinkers—the type of thinkers from whom our modern cyberneticists descend.
