Chapter 12: The Cell Cycle

Cell division is part of the cell cycle, the life of a cell from its origin in the division of a parent cell until its own division into two. Concept 12.1 Cell division results in genetically identical daughter cells. Cell division requires the distribution of identical genetic material—DNA—to two daughter cells.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at
