This book, along with an instructor's guide (available at www.valuefoundation.org) was developed to support a 3-credit hour university course on Value Engineering principles. The objective of the course is to introduce the concept of value engineering and demonstrate its techniques and application. The

course of study provides practical knowledge in specialized techniques that comprise the value engineering methodology and the manner in which they are applied through a systematic job plan approach.

This publication is designed to be part of a University level course on Value Engineering Theory. As Such, it is presented in two sections: Section one of this publication contains an eleven-part reading supplement to Larry Miles' book, "Techniques of Value Analysis and Engineering". Section two contains the reading assignment and content of the eleven basic lectures for the course. The objectives are to introduce the concept of value engineering and demonstrate its application and techniques.

The first decade of 21st century witnessed several changes, world wide, in technology management, restructuring and down sizing global trade and competition, international quality standards, information exchange, lean manufacturing and virtual enterprises etc. In this age of globalization, the survival of any industry mainly depends on its cost of production and quality of its products. With the rapid growth of competition and shrinking product life cycle value engineering has become an essential tool for attaining a competitive edge. This volume provides a logistic view of value engineering. The chapters written by experts in their respective fields are organized into different sections covering. Basic concepts of value engineering Information Technology and Value Engineering Systems Situational Case Studies / Industrial Examples Role of value engineering in profit improvement and effectiveness.

This research paper discusses the principles and procedures of the Value Engineering discipline. Value Engineering has been practiced for over 30 years in the manufacturing sector of the economy, but has never been fully accepted in the construction industry. The paper discusses the theory and methodology supporting the application of Value Engineering and the manner in which it can be applied to the various phases of the process of constructing facilities. Specific applications of Value Engineering, which can be beneficial for construction managers are discussed. Case studies where Value Engineering has resulted in significant cost savings, and examples of current construction industry practice are presented.
