The revised second edition of this tertiary-level text takes account of developments in legislation and case law since the publication of the first edition in 1989. Includes major decisions and important changes in the law of restitution and unjust enrichment, and trade practices. Provides a new chapter on agency and employment, and new material on planning and building control, design review by planning appeals tribunals, and duties of consent authorities. Includes table of cases, bibliography and index. The author is a solicitor of the High Court of Australia and a senior lecturer in the School of Architecture, UNSW.

For a construction business to function properly, architects, engineers, and contractors need to understand how the various state and federal laws affect their business and how to avoid disputes and exposure to liability. This book offers a comprehensive review of the US legal environment, both criminal and civil, focusing on the key legal concepts and issues applicable to a typical construction project. Construction professionals will find clear, concise introduction to a wide range of contractual issues related to project participants, as well as issues related to the actual construction and litigation.

The primary focus of this text is to provide a bridge for students between the academic world and the real world. This bridge is built through an understanding of what is law, how law is created, how law affects almost every activity of human conduct, and how legal institutions operate. Intended mainly for architectural and engineering students, but increasingly for those in business schools and law schools, this text features a clear, concise, and jargon-free presentation. It probes beneath the surface of legal rules and uncovers why these rules developed as they did, outlines arguments for and against these rules, and examines how they work in practice. Updated with the most recent developments in the legal aspects of architectural, engineering, and the construction processes, this text is also a valuable reference for practitioners and has been cited in over twenty-five court decisions. The construction industry now has a clear, targeted resource for learning pertinent legal principles. Traditional books focus on general legal principles or general construction practices, while this book

focuses on that critical place where the law and construction practices intersect. From labor law to contracts, property law to insurance, Construction Law for Managers, Architects, and Engineers uses real-world examples and clear, straightforward business language to transform complex legal jargon into relevant, applicable legal principles and strategies. This book serves as an ideal reference for managers, architects, engineers, construction executives, as well as a useful learning tool for students seeking the knowledge to succeed in these important fields. Provides a framework for understanding of the legal, contractual and procedural implication of architectural practice. The book acts as a useful aide-memoire for students and practitioners based on the premise that smooth legal administration will provide the conditions under which client relations can be constructive and good design can be achieved.

AutoCAD 2015 for Interior Design and Space Planning helps students understand the commands and features of AutoCAD 2015 and demonstrates how to use the program to complete interior design and space planning projects. Covering both two- and three-dimensional drawings, the text provides abundant exercises that walk students step-by-step through the use of AutoCAD prompts and commands. Using numerous illustrations, the text captures the essence of this powerful program and the importance it plays in the interior design, architecture and space planning professions. Features include:

- Covers new AutoCAD 2015 interface
- Progresses from basic commands to complex drawing exercises.
- Provides over 100 exercises and projects.
- Highlights seven projects appropriate for interior design, space planning and architecture students.
- Includes coverage of the AutoCAD DesignCenter
- Covers solid modeling in two chapters

Legal Architecture addresses how the environment of the trial can be seen as a physical expression of our relationship with ideals of justice. It provides an alternative account of the trial, which charts the troubled history of notions of due process and participation. In contrast to visions of judicial space as neutral, Linda Mulcahy argues that understanding the factors that determine the internal design of the courthouse and courtroom are crucial to a broader and more nuanced understanding of the trial. Partitioning of the courtroom into zones and the restriction of movement within it are the result of turf wars about who can legitimately participate in the legal arena and call the judiciary to account. The gradual containment of the public, the increasing amount of space allocated to advocates, and the creation of dedicated space for journalists and the jury, all have complex histories that deserve attention. But these issues are not only of historical significance. Across jurisdictions, questions are now being asked about the internal configurations of the courthouse and courtroom, and whether standard designs meet the needs of modern participatory democracies: including questions about the presence and design of the modern dock; the ways in which new technologies threaten to change the dynamics of the trial and lead to the dematerialization of our primary site of adversarial practice; and the extent to which courthouses are designed in ways which realise their professed status as public spaces. This fascinating and original reflection on legal architecture will be of interest to socio-legal or critical scholars working in the field of legal geography, legal history, criminology, legal systems, legal method, evidence, human rights and architecture.
