This book de-mystifies the jargon of webcams and computer processing, and provides detailed hints and tips for imaging the Sun, Moon and planets with a webcam. It demonstrates how inexpensive tools are revolutionizing imaging in amateur astronomy. Anyone with a modest telescope and a webcam can now obtain jaw-dropping lunar and planetary images to rival those taken with mid-range astronomical CCD cameras costing thousands of dollars. A glance through the images in this book shows just what spectacular results can be achieved by using a webcam with your telescope! Your scientific results will be sought by professional astronomers.

This report describes the PERSUB Subroutine System. PERSUB is a set of matrix-oriented subroutines developed primarily for the purpose of providing the researcher a maximum of flexibility in designing a sequence of analyses to be carried out on research data. With a few minor exceptions, the system is written entirely in FORTRAN. The report contains a listing of the source program and a brief description of each subroutine. The system was originally developed for use on a 16K IBM 7040 with two channels, three tape units per channel, and one disk unit. It should compile and run with few modifications on any similar configuration with a larger core or additional peripheral units. (Author).

Offers advice on the challenges of modern dating, including setting up an online dating profile and sexting, and navigates individuals through dating's ups and downs with lists, infographics, stories, and checkpoints.

Now available in PDF format. The DK Eyewitness Istanbul Travel Guide will lead you straight to the best attractions Istanbul has to offer. The DK Eyewitness Istanbul Travel Guide shows you what others only tell you.

Philip's Astrophotography With Mark Thompson is an essential guide for anyone wishing to photograph or image the stars and planets, written by TV's favourite astronomer. For many people, looking at the sky is not enough and they would love to try and capture what they can see. Until a few years ago, capturing astronomical images was fraught with many challenges, but with the development of digital cameras replacing film, things have become much easier and great astronomical images are now within the reach of even the most novice stargazer. Mark Thompson has spent many years capturing the beauty of the night sky, first with film and now with the digital camera, and has discovered and overcome many of the pitfalls. This book takes the reader on a journey through the world of capturing astronomical images from using the humble mobile phone to specialist cameras, brought to life with Mark's personal experiences and many of his own astronomical images.

The Science of Kabbalah (Pticha) is the first in a series of texts that Rav Michael Laitman, Kabbalist and scientist, designed to introduce readers to the special language and terminology of the Kabbalah. Here, Rav Laitman reveals authentic Kabbalah in a manner that is both rational and mature. Readers are gradually led to an understanding of the logical design of the Universe and the life whose home it is. The Science of Kabbalah, a revolutionary work that is unmatched in its clarity, depth, and appeal to the intellect, will enable readers to approach the more technical works of Baal HaSulam (Rabbi Yehuda Ashlag), such as 'Talmud Eser Sefirot' and Zohar. Although scientists and philosophers will delight in its illumination, laymen will also enjoy the satisfying answers to the riddles of life that only authentic Kabbalah provides. Now, travel through the pages and prepare for an astonishing journey into the 'Upper Worlds'.

In this comedic quintet, five couples explore the delights and disappointments of their sex lives. Whether they are the first two people on Earth or the last two, modern partners with shifting needs, exes on the eve of a life-altering event, or twelfth-century pen pals, following those most natural desires uncovers truths about their humanity. Altogether, FIVE TIMES IN ONE NIGHT is a hilarious examination of intimacy through the ages.

This complementary text provides detailed solutions for the problems that appear in Chapters 2 to 18 of Computational Techniques for Fluid Dynamics (CTFD), Second Edition. Consequently there is no Chapter 1 in this solutions manual. The solutions are indicated in enough detail for the serious reader to have little difficulty in completing any intermediate steps. Many of the problems require the reader to write a computer program to obtain the solution. Tabulated data, from computer output, are included where appropriate and coding enhancements to the programs provided in CTFD are indicated in the solutions. In some instances completely new programs have been written and the listing forms part of the solution. All of the program modifications, new programs and input/output files are available on an IBM compatible floppy direct from C.A.J. Fletcher. Many of the problems are substantial enough to be considered mini-projects and the discussion is aimed as much at encouraging the reader to explore ex tensions and what-if scenarios leading to further development as at providing neatly packaged solutions. Indeed, in order to givc the reader a better intro duction to CFD reality, not all the problems do have a "happy ending". Some suggested extensions fail; but the reasons for the failure are illuminating.

This innovative, inexpensive supplement will add a special dimension to any general physics class, or advanced course in special relativity. Professor Moore has written a concise yet thorough introduction to topics in special relativity, developing concepts clearly and presenting them in an accessible manner.
