The success of industrial agriculture and the green revolution in recent decades has often masked by significant externalities, affecting natural resources and human health as well as agriculture itself. Environmental and health problems associated with agriculture have been increasingly well documented, but it is only recently that the scale of the costs has attracted the attention of planners and scientists. Increasing consciousness about conservation of environment as well as of health hazards caused by agrochemicals has brought a major shift in consumer preference towards food quality. This timely book is a one stop resource for agriculturists, planners, policy makers and other stakeholders who are involved in organic cultivation. The findings emanated from this study would be helpful for Ministry of Agriculture, organic producers, organic input users and other associations involved in organic produce supply-chains in the country.

NATIONAL BESTSELLER Henry Bright has newly returned to West Virginia from the battlefields of the First World War. Griefstruck by the death of his young wife and unsure of how to care for the infant son she left behind, Bright is soon confronted by the destruction of the only home he's ever known. His hopes for safety rest with the angel who has followed him to Appalachia from the trenches of France and who now promises to protect him and his son. Haunted by the abiding nightmare of his experiences in the war and shadowed by his dead wife's father, the Colonel, and his two brutal sons, Bright, along with his newborn, makes his way through a ravaged landscape toward an uncertain salvation. DON'T MISS THE EXCLUSIVE CONVERSATION BETWEEN JOSH RITTER AND NEIL GAIMAN IN THE BACK OF THE BOOK.

Biometric recognition is one of the most widely studied problems in computer science. The use of biometrics techniques, such as face, fingerprints, iris and ears is a solution for obtaining a secure personal identification. However, the "old" biometrics identification techniques are out of date. This goal of this book is to provide the reader with the most up to date research performed in biometric recognition and descript some novel methods of biometrics, emphasis on the state of the art skills. The book consists of 15 chapters, each focusing on a most up to date issue. The chapters are divided into five sections- fingerprint recognition, face recognition, iris recognition, other biometrics and biometrics security. The book was reviewed by editors Dr. Jucheng Yang and Dr. Loris Nanni. We deeply appreciate the efforts of our guest editors: Dr. Girija Chetty, Dr. Norman Poh, Dr. Jianjiang Feng, Dr. Dongsun Park and Dr. Sook Yoon, as well as a number of anonymous reviewers
