Plywood for Boat Building. When boat building with plywood always use the best quality you can afford. For hulls and decks, my advice is to always use marine grade. Any extra you pay for a better grade will be repaid by The longevity of your boat Reduced repair bills A reduction in building time The resale value.

Plywood for Boat Building. - DIY Wood Boat
What most people don't know is that the WWII PT boats were built of plywood and were sturdy in wartime situations. It truly simplifies boat building from the old fashioned strip plank method and vastly speeds your project to completion.

Boatbuilding With Plywood: Glen L. Witt: 9780939070077 ...
For plywood building, epoxy with its strength and gap-filling properties is the way to go. However for other wood gluing applications it has perhaps been over hyped by the advertisers. It is certainly waterproof and is excellent for sealing end grain. However it does set hard and therefore can be brittle. Once set cleaning off any excess is difficult.

Glue for Wooden Boat Building - DIY Wood Boat

Boatbuilding with Plywood by Glenn L. Witt
In a nutshell Stitch and glue boatbuilding has 4 major steps. Plywood parts of the boat are measured and cut according to plans. Small holes are made around the edges of the pieces. Wire is used to temporarily stitch the boat parts together by stitching the plywood through the small holes. It's very much like putting a puzzle together or sewing clothe.

Stitch and Glue Boatbuilding method using Plywood and Epoxy
When starting on my boatbuilding journey I was primarily looking to build a plywood on frame boat, and as expected this method is the main focus the book covered in great detail. Many options for stems, chine logs, cabin sides and many other boat components are outlined and it would have been nice to see photos of more of them rather than just line drawings.

Boatbuilding with Plywood Chapter 6 - Fastenings Continued. Plate 6A - Fasteners commonly used in plywood boatbuilding include: (A) Flat head wood screw, (B) Ring shank boat nail, and (C) Carriage bolt. Other incidental fastenings may include: (D) Lag bolt, (E) Flat head machine screw, (F) Machine bolt, (G) Hanger bolt, (H) Threaded rod with nut jammed on to form a through-bolt, and (I) Drift ...

Boatbuilding with Plywood, Chapter 6 - Fastenings page 1
5 crews come in three main types: round head, oval head, and flat head. The flat head wood screw is the most commonly used in plywood boatbuilding. All head types are available as a slot head or with a crosshead type such as the patented Phillips or Read-Prince varieties. These latter types are usually easier for machine driving, however, with the hot dipped galvanized variety, these do not work out so well since the cross head tends to load up with the molten zinc thereby making them harder ...

BOATBUILDING WITH PLYWOOD. This is the third edition of the most complete text on plywood boatbuilding, especially written with the amateur builder in mind. This book has become the recognized standard on a subject usually covered in other books by a chapter at best. It has been widely used as a reference text in college level boatbuilding classes. The latest edition expands into stitch-&-glue plywood construction. Numerous drawings & photos help put this building method in perspective & illustrate how almost anyone can build a plywood boat, simply & quickly. The revised text also covers the use of epoxies as adhesives, for encapsulating, & fiberglassing over plywood. A simplified scarfing method is illustrated for joining plywood. GLEN-L specializes in books for the home boatbuilder. All are written by boat designers in down to earth language specifically for the amateur. Three of these books are used as text books in college classes around the country. See the following other boatbuilder titles for the do-it-yourselfer: HOW TO FIBERGLASS BOATS, Illustrates fiberglassing methods using polyester & epoxy resins. HOW TO BUILD BOAT TRAILERS, RIGGING SMALL SAILBOATS, INBOARD MOTOR INSTALLATIONS (Converting auto engines for marine use), and FIBERGLASS BOATBUILDING FOR AMATEURS (Using one-off methods). Order from: GLEN-L Marine, 9152-RR Rosecrans, Bellflower, CA 90706.

After a successful career in centreboard racing dinghies, Ian Oughtred became one of the leading lights of the British wooden boat revival, designing, building and sailing many remarkable craft. These boats have gained a world-wide reputation for their elegance of line, sound construction and excellent sailing performance. His perfectionist approach may be unbusinesslike, but provides highly refined designs and detailed plans. In this he hopes to encourage a return to a deep appreciation of traditional values of craftsmanship, believing this is the vital part of the true education, and thus helps to nourish the human spirit in an impoverished age.

The first complete how-to guide for building the latest generation of quick and easy boats In Ultrasimple Boatbuilding, renowned designer Gavin Atkin shows you how to create elegant, seaworthy plywood boats with a minimum of time, experience, and expense. Using clearly written and illustrated step-by-step instructions, Atkin explains the basics of stitch-and-glue construction, tools, materials, shop safety, and more, as he helps you choose and build the simple boat of your dreams.

As a child, John Brooks loved to build models and sail with his grandfather. When most teenagers were at the prom, John was changing jibs in the Indian Ocean, halfway through a 35,000-mile, two-year cruise. He began building boats in commercial yards at 19, while studying boat design and building his own boats. John worked for many years honing his craftsmanship on fine yachts, small boats, custom furniture, and a harpsichord. He has been an instructor at the WoodenBoat School in Maine since the mid-1990s, teaching glued-lapstrake boatbuilding, fine interior joinery, and carving. Ruth Ann Hill grew up on the coast of Maine. A writer, boatbuilding assistant, naturalist, and graphic artist, Ruth is the author of Discovering Old Bar Harbor and Acadia National Park: An Unconventional Guide and a contributing editor for Maine Boats & Harbors magazine. John and Ruth started their business, Brooks Boats, in 1991. They design and build glued-lapstrake boats in West Brooklin, Maine-and get out to enjoy their handiwork in its proper element whenever they can.

Greg Rossel grew up cruising the waters of New York Harbor and spending time in the boatyards on the south shore of Staten Island where economics (more than anything else) made wooden boats the craft of choice. He makes his home in Maine where he specializes in the construction and repair of small wooden boats, as well as writing for several publications. Greg has been an instructor at WoodenBoat School in Maine since the mid-1980's, teaching lofting, skiff building, and the "Fundamentals of Boatbuilding".

Why is stitch-and-glue boatbuilding so popular? Any number of construction methods will produce a beautiful boat. But for the backyard builder with limited experience and a tight budget, the choice is not so complicated. Traditional plank-on-frame and cold-molded construction require complicated lofting and building molds--to say nothing of expensive tooling and lots of time. Stitch-and-glue construction, on the other hand, can produce the same results with a substantial savings in time and money. The process is quicker, easier, uses fewer parts, and produces a boat that is much easier to maintain--without the building molds and with only the simplest lofting. For tools, you need little more than a circular saw, a sander/polisher/grinder, a block plane, a framing square, a level, and a tape measure. Sam Devlin has elevated stitch-and-glue boatbuilding to an artform, and his graceful designs have attracted the attention of backyard builders across the country. Here is all you need to know to build the boat of your dreams, whether it's a 7-foot dinghy or a 40-foot power cruiser. Devlin's Boatbuilding: How to Build Any Boat the Stitch-and-Glue Way shares the wisdom of his 16 years of experience designing, building, and helping others build his fleet of small sail- and powerboats. It's all here, from choosing a design and setting up shop to painting the finished hull and launching. There is also a gallery of Devlin's designs and a detailed appendix listing sources for tools and other materials.

An illustrated guide to wooden boat construction using WEST SYSTEM epoxy by pioneers in the field of wood/epoxy composite construction. Subjects include Fundamentals of Wood/Epoxy Composite Construction, Core Boatbuilding Techniques, First Production Steps, Hull Construction Methods, and Interior and Deck Construction.

Tom Jones is a professional boatbuilder, designer, and writer.

This features a boatbuilding process which combines strength, beauty, and the workability of wood, with the low-maintenance characteristics of epoxy. Ideally suited to the amateur builder wanting a good, solid cruising boat, this is a complete "soup-to-nuts" presentation of the cold-molding process, with chapters detailing every facet of construction--from choosing a design and setting-up, through engine installation and wiring, to launching and sea trials. Parker has streamlined the cold-molding process to produce economical sturdy boats.
