"Residential liberal arts colleges maintain a unique place in the landscape of American higher education. These schools are characterized by broad-based curricula, small class size, and interaction between students and faculty. Aimed at developing students' intellectual literacy and critical-thinking skills rather than specific professional preparation, the value proposition made by these colleges has recently come under intense pressure. Remaking College brings together a large and distinguished group of higher education leaders to define the American liberal arts model, to describe the challenges these institutions face, and to propose sustainable solutions. Both economic and strategic environments have developed to threaten these schools. Since 1990, for example, 35 percent of these institutions have transformed into "professional" colleges offering more vocational fields to their curricula while others have closed their doors entirely. Is there a future for these uniquely American institutions like Vassar and Smith, Macalester and Pomona, Middlebury and Swarthmore? Remaking College elucidates the shifting economic and financial models for liberal arts colleges and considers the opportunities afforded by technology, globalism, and intercollegiate cooperative models. Finally, it considers the unique position these schools can play in their communities and in the larger world"--

An NPR Favorite Book of the Year Winner of the Critics' Choice Book Award, American Educational Studies Association Winner of the Mirra Komarovsky Book Award Winner of the CEP-Mildred García Award for Exemplary Scholarship "Eye-opening...Brings home the pain and reality of on-campus poverty and puts the blame squarely on elite institutions." -Washington Post "Jack's investigation redirects attention from the matter of access to the matter of inclusion...His book challenges universities to support the diversity they indulge in advertising." -New Yorker "The lesson is plain—simply admitting low-income students is just the start of a university's obligations. Once they're on campus, colleges must show them that they are full-fledged citizen." -David Kirp, American Prospect "This book should be studied closely by anyone interested in improving diversity and inclusion in higher education and provides a moving call to action for us all." -Raj Chetty, Harvard University The Ivy League looks different than it used to. College presidents and deans of admission have opened their doors—and their coffers—to support a more diverse student body. But is it enough just to admit these students? In this bracing exposé, Anthony Jack shows that many students' struggles continue long after they've settled in their dorms. Admission, they quickly learn, is not the same as acceptance. This powerfully argued book documents how university policies and campus culture can exacerbate preexisting inequalities and reveals why some students are harder hit than others.

Long considered the standard for honors and high-level mainstream general chemistry courses, PRINCIPLES OF MODERN CHEMISTRY continues to set the standard as the most modern, rigorous, and chemically and mathematically accurate text on the market. This authoritative text features an "atoms first" approach and thoroughly revised chapters on Quantum Mechanics and Molecular Structure (Chapter 6), Electrochemistry (Chapter 17), and Molecular Spectroscopy and Photochemistry (Chapter 20). In addition, the text utilizes mathematically accurate and artistic atomic and molecular orbital art, and is student friendly without compromising its rigor. End-of-chapter study aids focus on only the most important key objectives, equations and concepts, making it easier for students to locate chapter content, while applications to a wide range of disciplines, such as biology, chemical engineering, biochemistry, and medicine deepen students' understanding of the relevance of chemistry beyond the classroom.

This unique text is ingeniously organized by class of compound and by property or reaction type, not group by group or element by element (which requires students to memorize isolated facts).
