Opinion | Profits and Social Responsibility: Revisiting ...

Corporate capitalism has been criticized for the amount of power and influence corporations and large business interest groups have over government policy, including the policies of regulatory agencies and influencing political campaigns (see corporate welfare). Many social scientists have criticized corporations for failing to act in the interests of the people, and their existence seems to circumvent the principles of democracy, which assumes equal power relations between individuals in a ...

is and how its legal privileges relate to the real interests of persons with a stake in its activities. The key question is: which stakeholders have a right for their particular interests to be represented by a corporation and to hold its

Rejoinder to Veldman's review of Capitalism, Corporations ...

Capitalism is a social and economic system which recognizes individual rights, including the right to own properties and the possession of goods for the individual's personal consumption. Corporatism, on the other hand, is a form of economy that was created as an option to socialism and intends to achieve social justice and equality without the need to take away private property from individual members of society.

Author Biographies. Frank G. A. de Bakker (PhD, University of Twente) is professor of corporate social responsibility at IESEG School of Management in Lille, France, where he is a member of LEM-CNRS (UMR 9221) and is coordinating the IESEG Center for Organizational Responsibility (ICOR). In his research, he combines insights from institutional theory, social movement studies, and stakeholder ...

Samuel Mansell critiques the principles of stakeholder theory, proposing instead a qualified version of Friedman's shareholder theory.

Despite the influence corporations wield over all aspects of everyday life, there has been a remarkable absence of critical inquiry into the social constitution of this power. In analysing the complex relationship between corporate power and the widespread phenomenon of share ownership, this book seeks to map and define the nature of resistance and domination in contemporary capitalism. Drawing on a Marxist-informed framework, this book reconnects the social constitution of corporate power and changing forms of shareholder activism. In contrast to other texts that deal with corporate governance, this study examines a diverse and comprehensive set of themes, from socially responsible investing to labour-led shareholder activism and its limitations. Through this ambitious and critical study, author Susanne Soederberg demonstrates how the corporate governance doctrine represents an inherent feature of neoliberal rule, effectively disembedding and depoliticising relations of domination and resistance from the wider power and paradoxes of capitalism. Examining corporate governance and shareholder activism in a number of different contexts that include the United States and the global South, this important book will be of interest to students and scholars of international political economy, international relations and development studies. It will also be of relevance to a wider range of disciplines including finance, economics, and business and management studies. Winner of the Davidson/Studies in Political Economy Award.

This is the first in-depth examination of the important ongoing fusion of activism, capitalism, and social change masterfully told through a compelling narrative filled with vivid stories and striking studies. Today, corporations and their executives are at the front lines of some of the most important and contentious social and political issues of our time, such as voting rights, gun violence, racial

justice, immigration reform, climate change, and gender equality. Why is this sea change in business and activism happening? How should executives and activists engage one another to create meaningful progress? What are potential pitfalls and risks for each side? What can they learn from each other? What first principles should guide leaders moving forward? The Capitalist and the Activist offers an engaging and thoughtful look at the new reality of corporate social activism—its driving forces, promises and perils, and implications for our businesses and personal lives. Weaving deep research and fascinating stories that span business, entertainment, history, science, and politics, Tom Lin provides an insightful road map for how society arrived here and a practical compass for moving forward. Drawing together examples from the civil rights movement, campaign finance litigation, gun regulation, Black Lives Matter, the Confederate flag controversy, the Trump presidency, and other historical events, Lin brilliantly reveals and charts the course for a changing society of capitalists and activists seeking both profit and progress. The Capitalist and the Activist is a must-read for anyone trying to understand the emerging future of activism, business, and politics.

Reimagining our global economy so it becomes more sustainable and prosperous for all Our global economic system is broken. But we can replace the current picture of global upheaval, unsustainability, and uncertainty with one of an economy that works for all people, and the planet. First, we must eliminate rising income inequality within societies where productivity and wage growth has slowed. Second, we must reduce the dampening effect of monopoly market power wielded by large corporations on innovation and productivity gains. And finally, the short-sighted exploitation of natural resources that is corroding the environment and affecting the lives of many for the worse must end. The debate over the causes of the broken economy—laissez-faire government, poorly managed globalization, the rise of technology in favor of the few, or yet another reason—is wide open. Stakeholder Capitalism: A Global Economy that Works for Progress, People and Planet argues convincingly that if we don't start with recognizing the true shape of our problems, our current system will continue to fail us. To help us see our challenges more clearly, Schwab—the Founder and Executive Chairman of the World Economic Forum—looks for the real causes of our system's shortcomings, and for solutions in best practices from around the world in places as diverse as China, Denmark, Ethiopia, Germany, Indonesia, New Zealand, and Singapore. And in doing so, Schwab finds emerging examples of new ways of doing things that provide grounds for hope, including: Individual agency: how countries and policies can make a difference against large external forces A clearly defined social contract: agreement on shared values and goals allows government, business, and individuals to produce the most optimal outcomes Planning for future generations: short-sighted presentism harms our shared future, and that of those yet to be born Better measures of economic success: move beyond a myopic focus on GDP to more complete, human-scaled measures of societal flourishing By accurately describing our real situation, Stakeholder Capitalism is able to pinpoint achievable ways to deal with our problems. Chapter by chapter, Professor Schwab shows us that there are ways for everyone at all levels of society to reshape the broken pieces of the global economy and—country by country, company by company, and citizen by citizen—glue them back together in a way that benefits us all.

Climate change is one of the greatest threats facing humanity, a definitive manifestation of the well-worn links between progress and devastation. This book explores the complex relationship that the corporate world has with climate change and examines the central role of corporations in shaping political and social responses to the climate crisis. The principal message of the book is that despite the need for dramatic economic and political change, corporate capitalism continues to rely on the maintenance of 'business as usual'. The authors explore the different processes through which corporations engage with climate change. Key discussion points include climate change as business risk, corporate climate politics, the role of justification and compromise, and managerial identity and emotional reactions to climate change. Written for researchers and graduate students, this book moves beyond descriptive and normative approaches to provide a sociologically and critically informed theory of corporate responses to climate change.

This is the first in-depth examination of the important ongoing fusion of activism, capitalism, and social change masterfully told through a compelling narrative filled with vivid stories and striking studies. Today, corporations and their executives are at the front lines of some of the most important and contentious social and political issues of our time, such as voting rights, gun violence, racial justice, immigration reform, climate change, and gender equality. Corporations dominate our societies. They employ us, sell to us and influence how we think and who we vote for, while their economic interests dictate local, national and global agendas. Written in clear and accessible terms, this much-needed textbook provides critical perspectives on all aspects of the

relationship between business and society: from an historical analysis of the spread of capitalism as the foundation of the 'corporate' revolution in the late nineteenth century to the regulation, ethics and exclusionary implications of business in contemporary society. Furthermore, it examines how corporate power and capitalism might be resisted, outlining a range of alternatives, from the social economy through to new forms of open access or commons ownership.

In this important book, Bryn Jones uses insights from political economy, historical analysis and sociological concepts of the corporation, as a socially disembodied but political actor, to address concerns over the over-reach of Anglo-Saxon corporations. These firms are compared with their continental European and East Asian counterparts, both in their social and economic functions and their institutional structures. Jones then draws on alternative models proposed by advocates of CSR, cooperative enterprise and corporate democratisation, to argue for key reforms for corporations' greater social accountability.

This book is a continuation of *Corporate Law and the Theory of the Firm: Reconstructing Corporations, Shareholders, Directors, Owners, and Investors*. The author extends his analysis of contract law, property law, agency law, trust law, and corporate statutory law and applies that analysis to defy conventional concepts and theories in economics, finance, investment, and accounting and expose the artificial boundaries established by decades of research founded on indefensible assumptions and fallacious conclusions. Using the Humpty Dumpty principle, where words mean what the authors want them to mean, economists have created "strange new worlds" where contract law, property law, agency law, and corporate statutory law no longer apply. The author dismantles the theory of the firm by proving the theory of the firm wilfully and intentionally ignores fundamental contract law, property law, agency law, and corporate statutory law. Contrary to the theory of the firm, shareholders do not own corporations, directors are not agents of shareholders, and shareholders are not investors in corporations. The author proves that by property law and corporate law, capital is not privately owned by capitalists but by corporations. Entire economic and social systems have been constructed that have no basis in law. With the advent of publicly traded corporations, the capital is there, but both capitalists and capitalism have been rendered extinct. This book will appeal to researchers and graduate and upper-level undergraduate students in economics, finance, accounting, law, and sociology, as well as legal scholars, attorneys and accountants.
