His first line of defense was that "an exhaustive bipartisan study of all 88 counties in Ohio was conducted ... they didn't have the facts that they needed to make the case. John has looked at the ...

This collection of essays has its origins in the MeCCSA 2007 conference held in Coventry in January that year. Like most edited volumes which emerge from conference contexts, this one comprises a richly diverse set of original papers which span the various themes and topics which together make up the fascinating field of media and communication. The book is broadly divided into four sections: media/public; media workers and professional identity; media industries and policy concerns; and political communication. The first section looks at the transformation of the private and public spheres through new technologies, and the phenomenon and implications of audience-mediated genres such as reality TV. The second part of the book looks at media practice from the point of view of both content and the self-policing of professional norms. The third part considers media policy including gender issues within the Scottish creative industries, and the history and future of the BBC charter. The last section looks at political communication and essays here are concerned with elite political rhetoric, together with a consideration of the internet's impact on political activism. The editors believe that, within the wide-ranging subject matter our authors have considered, a common theme emerges. This is the way in which contemporary communication acts are structured by a number of closely related forces; capital, technology, social norms, resistive practices and gendered subjectivity all contribute to the production of public meaning.

This volume contains the complete set of tutorial papers presented at the 16th IFIP (International Federation for Information Processing) Working Group 7.3 International Symposium on Computer Performance Modelling, Measurement and Evaluation, and a number of tutorial papers presented at the 1993 ACM (Association for Computing Machinery) Special Interest Group METRICS Conference on Measurement and Modeling of Computer Systems. The principal goal of the volume is to present an overview of recent results in the field of modeling and performance evaluation of computer and communication systems. The wide diversity of applications and methodologies included in the tutorials attests to the breadth and richness of current research in the area of performance modeling. The tutorials may serve to introduce a reader to an unfamiliar research area, to unify material already known, or simply to illustrate the diversity of research in the field. The extensive bibliographies guide readers to additional sources for further reading.

In its 4th edition, this book remains focused on increasing public awareness of nature and motives of cyber vandalism, the weaknesses inherent in cyberspace infrastructure, and the means available to protect ourselves and our society. The new addition aims to integrate security education and awareness with morality and ethics. In all, the security of information in general and of computer networks in particular, on which our national critical infrastructure and, indeed, our lives depend, is based squarely on the individuals who build the hardware and design and develop the software that run the networks that store our vital information. Addressing security issues with ever-growing social networks are two new chapters: "Security of Mobile Systems" and "Security in the Cloud Infrastructure."

This title describes the state of the art in all areas of spatial marketing, discussing the various constituents which make up the geography of markets. Demand varies according to location and can be measured according to revenue, the number of households, spending patterns and lifestyles. Supply is also dependent on position, because prices, services, products and available shops rely on location, while the difference between supply and demand is the rationale for the role of the trader. The book also covers the way geographic techniques help to solve marketing problems and contains chapters written by contributors with extensive experience in this field; given that it is crucial for companies to direct their marketing correctly at their target audience, this will be indispensable reading for those involved in this area.

This book constitutes the proceedings of the 11th European Conference on Software Architecture, ECSA 2017, held in Canterbury, UK, in September 2017. The 9 full papers presented together with 12 short papers and one keynote talk were carefully reviewed and selected from 54 submissions. They are organized in topical sections on Software Architecture Analysis and Verification; Software Architecture Evolution; Automatic Generation; Architectural Decisions; Software Architecture Practice.?

In most liberal democracies commercialized media is taken for granted, but in many authoritarian regimes the introduction of market forces in the media represents a radical break from the past with uncertain political and social implications. In *Media Commercialization and Authoritarian Rule in China*, Daniela Stockmann argues that the consequences of media marketization depend on the institutional design of the state. In one-party regimes such as China, market-based media promote regime stability rather than destabilizing authoritarianism or bringing about democracy. By analyzing the Chinese media, Stockmann ties trends of market liberalism in China to other authoritarian regimes in the Middle East, North Africa, sub-Saharan Africa and the post-Soviet region. Drawing on in-depth interviews with Chinese journalists and propaganda officials as well as more than 2000 newspaper articles, experiments and public opinion data sets, this book links censorship among journalists with patterns of media consumption and the media's effects on public opinion.
