endless variations of our persons - so-called ' data doubles ' . Whilst never a precise portrayal of who we are, they unarguably contain glimpses of details about us that, when deployed into various routines (such as management, policing and advertising) can affect us in many ways. How are we to deal with Big Data? When is it beneficial to us? When is it harmful? How might we regulate it? Offering careful and critical analyses, this timely volume aims to broaden well-informed, unprejudiced discourse, focusing on: the tenets of Big Data, the politics of governance and regulation; and Big Data practices, performance and resistance. An interdisciplinary volume, *The Politics of Big Data* will appeal to undergraduate and postgraduate students, as well as postdoctoral and senior researchers interested in fields such as Technology, Politics and Surveillance.

This book is the first to explore the similarities and differences in gender related policy making and outcomes in Japan and the United States. It focuses on the role of women's movements and other factors in determining policy. Three policies are examined: Equal employment, domestic violence and reproductive rights, with additional attention to gender equality policy in Japan and 'family friendly policy' in both nations. The analysis examines the significance of international feminism and new standards of gender equity - kansetsu gaiatsu - as a resource for Japanese feminists seeking policy reform, as well as new trends toward policy cooperation. The future role of the United States, long a leader in policy development for women, is critically analyzed, and Gelb suggests that American feminists and policymakers can learn important lessons from the experience of Japanese women's movements and efforts at influencing

public policy.

Increasingly, policies and laws commonly agreed within the EU shape the political and economic scenarios of nation states in Europe. However, the same European context is radically changing, essentially due to three major recent developments: the adoption of the Euro, EU enlargement to the east and the implementation of the Lisbon Strategy of structural reforms for growth and competitiveness. The book presents a thorough economic analysis of these three events and of their implications for both existing and potential EU policies and objectives. Carlo Altomonte and Mario Nava have written a very rigorous text in an accessible and jargon-free style, ensuring easy acquisition of invaluable insights into the European economic set-up and the possible evolution of EU policies, including an update on the

reform of the Growth and Stability Pact and of the 2007 13 Financial Perspectives. The accessibility of economic concepts combined with the methodological rigour of this up-to-date text will be of great interest to both policy makers and students.

Policies concerning language use are increasingly tested in an age of frequent migration and cultural synthesis. With conflicting factors and changing political climates influencing the policy-makers, Elana Shohamy considers the effects that these policies have on the real people involved. Using examples from the US and UK, she shows how language policies are promoted and imposed, overtly and covertly, across different countries and in different contexts. Concluding with arguments for a more democratic and open approach to language policy and planning, the final note is one of optimism, suggesting

For over eighty years the Arab region has been deriving massive wealth from its natural resources. Nevertheless, its economic performance has been at the mercy of ebbs and flows of oil prices and its resources have been slowly depleting. The two critical questions are why and how Arab countries might escape the oil curse. Institutions and Macroeconomic Policies in Resource-Rich Arab Economies focuses on the unique features of the Arab world to explain the disappointing outcomes of macroeconomic policy. It explores the interaction between oil and institutions to draw policy recommendations on how Arab countries can best exploit their oil revenues to avoid the resource curse. Case studies and contributions from experts provide an

understanding of macroeconomic institutions (including their underlying rules, procedures and institutional arrangements) in oil-rich Arab economies and of their political economy environment, which has largely been overlooked in previous research. Institutions and Macroeconomic Policies in Resource-Rich Arab Economies offers novel macroeconomic policy propositions for exchange rate regimes, fiscal policy and oil wealth distribution that is more consistent with macroeconomic stability and fiscal sustainability. These policy reforms, if implemented successfully, could go a long way in helping the resource-rich countries of the Arab region and elsewhere to avoid the oil curse.

businesses. Yet these consequences and the financial and human crises that follow catastrophes can often be traced to policies unsuited to the emerging scales of the problems they confront, and the lack of institutional capacity to implement planning and prevention or to manage disasters. This book seeks to overcome this mismatch and to guide development of a policy and institutional framework. For the first time it brings together into a coherent framework the insights of public policy, institutional design and emergency and disaster management.

The successful governance of critical risks is a strategic investment in preserving economic competitiveness and sustainable growth and in ensuring safer and better lives for the future. Citizens and businesses expect governments to be prepared for a wide range of possible crises

This book studies the interactions between monetary and fiscal policies in the euro area. It carefully discusses the process of policy competition and the structure of policy cooperation. As to policy competition, the focus is on competition between the European central bank, the American central bank, the German government, and the French government. As to policy cooperation, the focus is on the same institutions. These are higher-dimensional issues. The policy targets are price stability and full employment. The policy makers follow co- turkey or gradualist strategies. The policy decisions are taken sequentially or simultaneously. Monetary and fiscal policies have spillover effects. Special features of this book are numerical simulations of policy competition and numerical solutions to policy cooperation.
