Predictions of apocalyptic events that would result in the extinction of humanity, a collapse of civilization, or the destruction of the planet have been made since at least the beginning of the Common Era. Most predictions are related to Abrahamic religions, often standing for or similar to the eschatological events described in their scriptures. . Christian predictions typically refer to ...

Doing Meta-Analysis with R: A Hands-On Guide serves as an accessible introduction on how meta-analyses can be conducted in R. Essential steps for meta-analysis are covered, including calculation and pooling of outcome measures, forest plots, heterogeneity diagnostics, subgroup analyses, meta-regression, methods to control for publication bias, risk of bias assessments and plotting tools. Advanced but highly relevant topics such as network meta-analysis, multi-three-level meta-analyses, Bayesian meta-analysis approaches and SEM meta-analysis are also covered. A companion R package, dmetar, is introduced at the beginning of the guide. It contains data sets and several helper functions for the meta and metafor package used in the guide. The programming and statistical background covered in the book are kept at a non-expert level, making the book widely accessible. Features ¶ Contains two introductory chapters on how to set up an R environment and do basic imports/manipulations of meta-analysis data, including exercises ¶ Describes statistical concepts clearly and concisely before applying them in R ¶ Includes step-by-step guidance through the coding required to perform meta-analyses, and a companion R package for the book

This book is a comprehensive guide to rectal cancer care that will provide general and colorectal surgeons details regarding the latest developments in the field. The book aims to cover the dynamic shifts in rectal cancer care that have taken place over recent years. Management approaches, such as watch-and-wait and transanal approaches, are evaluated and assessed by experienced physicians to give readers a full understanding of the available treatment options. Chapter summaries are included to give a clinical overview of each approach and to assist the understanding of each topic covered, and make the book applicable to both general surgeons and specialist practice nurses, as well as rectal cancer specialists.

An R Companion to Applied Regression is a broad introduction to the R statistical computing environment in the context of applied regression analysis. John Fox and Sanford Weisberg provide a step-by-step guide to using the free statistical software R, an emphasis on integrating statistical computing in R with the practice of data analysis, coverage of generalized linear models, and substantial web-based support materials. The Third Edition has been reorganized and includes a new chapter on mixed-effects models, new and updated data sets, and a de-emphasis on statistical programming, while retaining a general introduction to basic R programming. The authors have substantially updated both the car and effects packages for R for this edition, introducing additional capabilities and making the software more consistent and easier to use. They also advocate an everyday data-analysis workflow that encourages reproducible research. To this end, they provide coverage of RStudio, an interactive development environment for R that allows readers to organize and document their work in a simple and intuitive fashion, and then easily share their results with others. Also included is coverage of R Markdown, showing how to create documents that mix R commands with explanatory text.

The thoroughly updated second edition of this key textbook provides an authoritative discussion of cardiovascular disease for the practicing primary care clinician. It examines a variety of disease states with emphasis on risk factors, risk estimation, and established cardiac disease. The book also explores the co-morbid conditions that surround cardiovascular disease. It includes key points, algorithms, case studies, recommendations on evidence-based practice, and summary boxes. A key resource for the busy practitioner, the Second Edition of Comprehensive Cardiovascular Medicine in the Primary Care Setting is designed to give residents, fellows, and primary care physicians the skills to confidently perform assessments, initiate and maintain efficacious therapy, and know when a referral to a cardiologist is advisable.

Comprehensive Medicinal Chemistry III provides a contemporary and forward-looking critical analysis and summary of recent developments, emerging trends, and recently identified new areas where medicinal chemistry is having an impact. The discipline of medicinal chemistry continues to evolve as it adapts to new opportunities and strives to solve new challenges. These include drug targeting, biomolecular

therapeutics, development of chemical biology tools, data collection and analysis, in silico models as predictors for biological properties, identification and validation of new targets, approaches to quantify target engagement, new methods for synthesis of drug candidates such as green chemistry, development of novel scaffolds for drug discovery, and the role of regulatory agencies in drug discovery. Reviews the strategies, technologies, principles, and applications of modern medicinal chemistry Provides a global and current perspective of today's drug discovery process and discusses the major therapeutic classes and targets Includes a unique collection of case studies and personal assays reviewing the discovery and development of key drugs
