Puns can make you laugh or groan, but when they're clues to these challenging and fun crossword puzzles, they'll make you smile with satisfaction. Can you find the five-letter word for "a race that's always a tie"? (Answer: ASCOT.) How about the three-letter word for "performing a scull operation"? (Answer: ROW.) If you can get those in short order, how about moving on to a 10-letter word for "small fries." (That answer is MICROCHIP.) Most of the puzzles are built around themes with several related words such as vegetables, insects, or Dr. Seuss books. But watch out--the vegetables may be spelled backwards; the insects are puns; and some of the Dr. Seuss puzzle answers include FIGURE OF SNEETCH, GRINCH MEAN TIME, and LAUNCHED A WOCKET. You can find the answers in back, but they're scattered around to make it harder to cheat.

This book consists of award papers from the 22nd annual conference of the JSAI (JSAI 2008) and selected papers from the three co-located workshops. Eight papers were selected among more than 400 presentations at the conference and 18 papers were selected from the 34 presentations at the co-located wo- shops; Logic and Engineering of Natural Language Semantics 5 (LENLS 2008), the 2nd International Workshop on Juris-informatics (JURISIN 2008), and the First International Workshop on Laughter in Interaction and Body Movement (LIBM 2008). The award papers from JSAI 2008 were selected through a r- orous selection process. In the process, papers recommended by session chairs, session commentators, and PC members were carefully reviewed, before the ?nal decision was made.

Revised and updated with the latest information in the field, the Fourth Edition of Computer Science Illuminated continues to engage and enlighten students on the fundamental concepts and diverse capabilities of computing. Written by two of today's most respected computer science educators, Nell Dale and John Lewis, the text provides a broad overview of the many aspects of the discipline from a generic view point. Separate program language chapters are available as bundle items for those instructors who would like to explore a particular programming language with their students. The many layers of computing are thoroughly explained beginning with the information layer, working through the hardware, programming, operating systems, application, and communication layers, and ending with a discussion on the limitations of computing. Perfect for introductory computing and computer science courses, the fourth edition's thorough presentation of computing systems provides computer science majors with a solid foundation for further study, and offers non-majors a comprehensive and complete introduction to computing.
