This topic is 1-F-3 in the CPSM exam and explores why organizations should have a supplier diversity program, how such a program should be developed and how it should be implemented. Here is a summary of ideas that the CPSM aspirant needs to consider: Why Supplier Diversity: Supplier diversity refers to minority and women owned suppliers. You have read a lot about how minority and women employees seem to have a lesser percentage of jobs than in the population.

According to the ISM, CPSM is the credential that surpasses the demands of the international marketplace with multi-faceted skills in areas such as finance, supplier relationship management, organizational global strategy and risk compliance. The CPSM qualification enables professionals to gain a clear understanding of their organization's supply operation and enable managers to take an active role in critical decisions. It is slightly different from APICS's CSCP in that it is targeting those who wish to have a broad understanding of all components of the profession. It focuses primarily on strategic supply management, less on fundamental or tactical level knowledge. CSCP places heavier focus on integrated supply chain, while CPSM does not. To succeed in the CPSM exams, you need to get yourself truly familiar with the most important information by going through sufficiently focused revision. This is where we fill the gap - you may think of our product as the unofficial supplement to the regular training class, or you may view it as a standalone module with a focus on building up your exam readiness. There are three exams. Exam 1 covers the Foundation of Supply Management. Exam 2 covers Supply Management Performance. Exam 3 deals with Leadership. This book covers ALL these exams.

Volume One of the ISM Professional Series

You often see books on theoretical approaches and new interventions in therapy, but you rarely, if ever, find a book where therapists discuss their personal reactions to and views of the therapy they offer. In this amazing volume, Tales from Family Therapy: Life-Changing Clinical Experiences, psychologists, psychotherapists, and marriage and family counselors come together to share their unique experiences in therapy sessions and how they've learned that often the clients know more than they do! As you will see, and as these therapists reveal, sometimes all the top-notch and most innovative theories in the world won't help a client in distress. Tales from Family Therapy isn't just about therapists learning a lesson or two from their clients. It's about compassion, healing, being taken by surprise, thinking on your toes, and encouraging people to believe in their strengths--not just their weaknesses. These stories represent to the authors some of the most special, most rewarding, and most puzzling moments in all their years of therapy. They invite you to share in their recollections and discussions of: the power of speaking accepting, respecting, and working with the realities clients bring the importance of first

impressions in counseling how personal narratives develop through relationship coloring outside the lines of the dominant culture helping clients determine when rocking the boat is needed listening to your clients and not just your theories developing the self-of-therapist In the therapy room anything can happen, and as Tales from Family Therapy shows, anything does. Graduate students, counselors, licensed therapists, family educators, and family sciences professionals, as well as lay readers, will find this insightful book a helpful forum where the struggles, doubts, and triumphs of psychotherapy are revealed to encourage and inspire those who participate in the therapeutic process.

Learn how China was able to catch up to the US as an AI superpower and discover the future of artificial intelligence. As we live in a world where cars no longer need drivers, phones can be unlocked with facial recognition, and the internet can even provide advertisements based on your browsing history, it's becoming more and more apparent that artificial intelligence (AI) is only going to get better. While the AI movement began in the United States, other countries have quickly caught up, including China who is now one of the largest AI superpowers in the world. However, the two countries continue to compete in the AI race and the two take drastically different approaches. For instance, China is determined to become the world leader and is doing whatever it takes to get there, including funneling billions of dollars into AI tech start-ups and making it as easy as possible to launch a new start-up. As Silicon Valley competes with its Chinese counterpart, Zhongguancun, Kai-Fu Lee discusses everything, including what led to China's success, what the future of AI looks like, and how a change in values can make our world a better place.

The authors identify key emerging trends and drivers in supply chain management, introduce powerful new strategies for redesigning supply chains, and present comprehensive global case studies showing how Nortel and General Motors have transformed their own supply chains to optimize value and drive out costs.
