Ribbon Mics. E xcept possibly for an announce booth (shown here), ribbon mics are seldom used in TV production. Although they can impart a deep, resonant "coloring" to sound, they are fragile and highly sensitive to moving air. This precludes their use outside the studio and on most booms -- which covers most TV production applications.

DVD-ROM contains: Interactive modules that illustrate concepts discussed in the text.

In general, communications is considered a glamor industry because of the creativity involved so competition is fierce, even for people with advanced degrees. I've known several people with journalism degrees who couldn't find a job so they ended up as high school teachers or something like that. It's all about your ability with words. Newscasts have to be written everyday. They have to have fresh, new, exciting, crisp stories. It takes a certain pragmatic skill to write good news copy quickly. If you can get a story, summarize it down into your own words very quickly, edit news footage to go with it to create a quick story on the nightly newscast, you will easily be in demand because these skills are rather rare. People who do these jobs often get tired of the stress involved and quit. On the other hand, I heard of one talk show host who had two jobs in different cities. He did his morning talk show, took a plane to the other city 150 miles away, did his evening show

This wonderful resource combines classroom instruction in TV technology with a year-long curriculum to teach high school students media and visual literacy, broadcast history, video production skills, and multimedia animation.

Lighting for Televised Live Events unlocks the science, art, philosophies, and language of creating lighting for live entertainment and presentations that work for the television camera as well as for the live audience. The book explores how to retain the essence and excitement of a live production while assuring that the show looks its best on-camera for the millions of viewers that can only see it on their TV, computer, tablet, or mobile phone screen. Readers will learn how to adapt an existing stage show for the camera, as well as how to design live entertainment or events specifically for TV. Filled with real-life examples and illustrations, the book covers a wide range of topics, including: how exposure and color work for the camera; how angle, visual balance, and composition can make people and backgrounds look their best, while preserving theatricality; information on camera equipment, screens, and projectors, as well as the control room environments that are found on a professional shoot; the unique challenges of lighting for the IMAG video screens used at festivals and concerts. Lighting for Televised Live Events is aimed at lighting design students, as well as professional designers that are considering a career — or a career expansion — in television. It is an essential resource for any stage lighting designer whose show may be shot for a television special or a live webcast and who will be asked by their client to collaborate with the incoming video team.

Cue & Cut is a 'practical approach to working in television studios' for anyone who might want to work in that medium. It's full of useful information about kit, and how you would use it to create multi-camera content. Written by a multi-camera producer-director with years of drama and teaching experience, it presents both a way of handling studios and a source of information about how things have changed from the days of monochrome to HD tapeless modes - with some thoughts on 3D HDTV The book is firmly based in first-hand teaching experience and experience of producing, direction, floor managing (and so on) and on working with top flight Actors, Writers, Musicians, Designers of all disciplines and Sound and Camera crews, both at the BBC and in ITV. The book will certainly cover multi-camera aspects of Undergraduate, HND and B.Tech courses and should be useful to those on short courses, whether practical or post-graduate.

Television Production & Broadcast Journalism provides students with basic technical skills necessary to enter the television production industry as a production assistant, and introduces broadcast journalism theory. The text provides an overview of the equipment, job responsibilities, and techniques involved in both traditional studio production and remote location work. The activities and processes involved in each phase of production are presented and reinforced with realistic examples, numerous photos showing students in actual production situations, and engaging student activities. Broadcast journalism coverage includes ethics and news judgment, types of stories, news writing, preparing news packages, and conducting interviews. The broadcast journalism concepts address skills and qualities required in the industry, but also incorporate classroom-appropriate standards and practices. The text places a strong emphasis on the importance of vocabulary and the correct use of technical terms. In addition to the glossary at the end of the textbook, a running glossary within the chapters provides an immediate formal definition of terms, as they are addressed in the text of the chapter. Talk the Talk features explain the difference in meaning between consumer and industry-specific terms, and clarify the proper use of industry terminology. Proper use of industry terms is an important factor in becoming a successful television production professional.

Radio Production Worktext, 5ED is designed to provide an introduction of the modern radio production studio, the equipment found in that studio, and basic techniques to accomplish radio production work. The text also emphasizes digital equipment but also includes information on the older analog equipment still used in radio. The worktext format combines information, Q&As, and projects, providing a complete resource for teaching and learning, either in a formal classroom setting or as a self-study guide for the individual. The companion CD-ROM provides project material and demonstrations of key concepts. Radio Production Worktext's clear and simple approach makes it a useful reference for the entry-level broadcaster. The new edition focuses on digital technologies but also covers the relevant analog technologies and their role, while continuing to reflect all tools and methods commonly in use. Some chapters have been reordered to strengthen the text, in recognition of the importance of digital technologies to the whole of the production process - and will bein the front of the book.
