Topics in Anti-Cancer Research covers new developments in the field of cancer. Novel drugs as anticancer agents include natural and synthetic phenazines and other anti-cancer compounds. It also encompasses the role of estrogen as endocrine disruptors and strategies targeting cancer stem cells for the treatment of different types of cancers, including myeloma and renal cell cancer. The diversity of researches and topics published in this eBook Series will be valuable to cancer researchers, clinicians, and cancer professionals aiming to develop novel anti-cancer targets for the treatment of various cancers. The topics covered in the eighth volume of this series are as follows: -Novel Drugs for Multiple Myeloma -Synthetic Estrogens are Endocrine Disruptors via Inhibition of AF1 Domain of ERs -Recent Progress of Phenazines as Anticancer Agents -Cancer Stem Cell Targeting for Anticancer Therapy: Strategies and Challenges

The first book of its kind to provide a full and comprehensive historical grounding of the contemporary issues of gender and women in science. Women in Science includes a detailed survey of the history behind the popular subject and engages the reader with a theoretical and informed understanding with significant issues like science and race, gender and technology and masculinity. It moves beyond the historical work on women and science by avoiding focusing on individual women scientists.
