When I read your term papers, I look for your ability to motivate your question using economic logic, your ability to critically analyze the past literature, and your ability to recognize empirical problems as they arise.

An indispensable survey of new developments and results in experimental economics When The Handbook of Experimental Economics first came out in 1995, the notion of economists conducting lab experiments to generate data was relatively new. Since then, the field has exploded. This second volume of the Handbook covers some of the most exciting new growth areas in experimental economics, presents the latest results and experimental methods, and identifies promising new directions for future research. Featuring contributions by leading practitioners, the Handbook describes experiments in macroeconomics, charitable giving, neuroeconomics, other-regarding preferences, market design, political economy, subject population effects, gender effects, auctions, and learning and the economics of small decisions. Contributors focus on key developments and report on experiments, highlighting the dialogue between experimenters and theorists. While most of the experiments consist of laboratory studies, the book also includes several chapters that report extensively on field experiments related to the subject area studied. Covers exciting new growth areas in experimental economics Features contributions by leading experts Describes experiments in macroeconomics, charitable giving, neuroeconomics, market design, political economy, gender effects, auctions, and more Highlights the dialogue by experimenters with theorists and each other Includes several chapters covering field experiments related to the subject area studied

OECD's 2013 economic review of Brazil examines recent economic developments, policies and prospects. This edition's special chapters cover productivity and competitiveness of Brazilian firms and income distribution and the new middle class.

Discussing a wide range of topics of contemporary relevance from the domain of finance and economics, this book presents a collection of twenty-four research papers, which were selected on the basis of their topicality, the novelty of their methods, and the importance of their subject matter. All papers pursue an empirical approach to address key research issues, and are categorized into three major parts. Part one includes papers related to development economics and environmental economics. The second part focuses on monetary economics, public economics, and behavioral economics, while the third tackles issues concerning corporate finance and financial risk management. Bringing together works of scholars from around the world, the book presents a truly global perspective, and not only serves as an essential guide on the topic for researchers, but also has a distinctive role to play in policymaking.

Routledge Handbook of the Economics of European Integration provides readers with a brief but comprehensive overview of topics related

to the process of European integration in the post-World War II period. Its short chapters reflect the most up-to-date and concise research, written by a collective of experts on their own subjects. The aim of this book is twofold. Firstly, the text illustrates the broad and diverse range of issues associated with European integration, and lastly, the key approaches and findings are summarised. Since institutional integration in Europe is an ongoing process, with possibly frequent and sometimes rapid changes, the chapters are intended to focus on the key features of the economic analyses of these topics. A wide and diverse set of economic issues is of direct relevance for European integration. These topics cover various fields, ranging from the history of the European Economic and Monetary Union, EU Trade Policy and the stability of international trade, single market issues over fiscal, monetary and other policies, the crisis that faces the Euro area, and institutions such as EU Council of Ministers. Not surprisingly, many of these issues have also been analysed from a European perspective. This handbook is designed to provide students, researchers, the public and policy makers with ready and accessible knowledge of issues related to European integration and will provide the definitive overview of research in the area.

Global capitalism is affected by the malaises of stagnation, financial fragility, increased income inequality, growing wealth concentration at the top, and a vanishing fair social contract. This book focuses on the incidence of these phenomena in the US, UK, Greece, Spain, Chile, South Africa, Australia, China, and other countries. The book looks at the effects of IMF-ECB led austerity policies in Europe. The book examines concrete country and global conditions combining theory, country studies, historical evidence, and international comparative analysis. The book also proposes new policy priorities to restore stability, reduce inequality, and consolidate democracy in 21st century capitalism.

The study of economics should not be highly abstract, but closely related to real-world events. Principles of Economics in Context addresses this challenge, laying out the principles of micro-and macroeconomics in a manner that is thorough, up to date and relevant to students, keeping theoretical exposition close to experience. Emphasizing writing that is compelling, clear, and attractive to students, it addresses such critical concerns as ecological sustainability, distributional equity, the quality of employment, and the adequacy of living standards. Key features include: Clear explanation of basic concepts and analytical tools, with Discussion Questions at the end of each section, encouraging immediate review of what has been read and relating the material to the students' own experience; Full complement of instructor and student support materials online, including test banks and grading through Canvas; Key terms highlighted in boldface throughout the text, and important ideas and definitions set off from the main text; A glossary at the end of the book containing all key terms, their definitions, and the number of the chapter(s) in which each was first used and defined. Updates for the second edition include: Expanded coverage of topics including inequality, financialization and debt issues, the changing nature of jobs, and sustainable development; New material on wage discrimination by race and gender; an expanded section on labor markets and immigration; Updated discussion of fiscal policy to include more recent developments such as the Trump tax cuts; New material on behavioral economics, public goods, and climate change policy; a new section on "The Economics of Renewable Energy." This new, affordable edition combines the just-released new editions of Microeconomics in Context and Macroeconomics in Context to provide an integrated full-year text covering all aspects of both micro-and macro-analysis and application, with many up-to-date examples and extensive supporting Web resources for instructors and students.

Foreign aid and overseas military intervention have been important and controversial political topics for over a decade. The government's controversial target to spend 0.7 per cent of national income on foreign aid has been widely welcomed by some, but strongly criticised by others. Furthermore, the controversy of the Iraq war rumbles on, even today. This is all happening amongst much instability in many parts of the world. In this short book, a number of authors challenge the assumption that we can bring about economic development and promote liberal democracies through direct foreign intervention – whether economic or military intervention. The lead author, William Easterly, drawing on his wide experience at the World Bank and as an academic, is a renowned sceptic of intervention. He points out that solutions proposed now to the problem of poverty are identical to solutions proposed decades ago – but the plans of rich governments simply do not successfully transform poor countries. Academics Abigail Hall-Blanco and Christian Bjornskov add further context and put forward empirical evidence that backs up Easterly's argument. Syvlie Aboa-Bradwell draws upon her own practical experience to give examples of how people in poor countries can be assisted to promote their own development. This book is essential reading for students, teachers and all interested in better understanding how to help – and how not to help – the world's most disadvantaged peoples.

It would be fair to say that foreign aid today is one of the most important factors in international relations and in the national economy of many countries – as well as one of the most researched fields in economics. Although much has been written on the subject of foreign aid, this book contributes by taking stock of knowledge in the field, with chapters summarizing long-standing debates as well as the latest advances. Several contributions provide new analytical insights or empirical evidence on different aspects of aid, including how aid may be linked to trade and the motives for aid giving. As a whole, the book demonstrates how researchers have dealt with increasingly complex issues over time – both theoretical and empirical – on the allocation, impact, and efficacy of aid, with aid policies placed at the center of the discussion. In addition to students, academics, researchers, and policymakers involved in development economics and foreign aid, this Handbook will appeal to all those interested in development issues and international policies.

This volume offers a comprehensive review of experimental methods in economics. Its 21 chapters cover theoretical and practical issues such as incentives, theory and policy development, data analysis, recruitment, software and laboratory organization. The Handbook includes separate parts on procedures, field experiments and neuroeconomics, and provides the first methodological overview of replication studies and a novel set-valued equilibrium concept. As a whole, the combination of basic methods and current developments will aid both beginners and advanced experimental economists.
