The Association officially endorses this definition of Instructional Technology which has been developed over three years by the Committee on Definition and Terminology. The Association recognizes that other theoretical frameworks exist and that these are valid, but believes that these are part of the more inclusive theoretical framework of Instructional Technology used in this definition. In making this definition and the document explaining it available, we hope to help other organizations clarify their relationship to the broad field of Instructional Technology. Although the Association offers this definition as its current position, it is committed to a continuous reevaluation of the definition and to revising and publishing it so that it reflects changing concepts and terminology. A document of this magnitude can only be produced as the result of the dedication and effort of the persons who formed the committee and of its chairperson, Barbara Seels and her collaborator, Rita C. Richey. Without their energies, skill, perseverance, and willingness to risk stating their perceptions in this format we could not have offered this document. Whether or not we agree with the statements presented here, they will provide a benchmark and a point of dialogue for further development of a profession which seeks to provide conditions for effective learning.

A one-stop knowledge resource, *Emerging Technologies in Distance*

## File Type PDF Educational Technology A Definition With Commentary

Education showcases the international work of research scholars and innovative distance education practitioners who use emerging interactive technologies for teaching and learning at a distance. This widely anticipated book harnesses the dispersed knowledge of international experts who highlight pedagogical, organizational, cultural, social, and economic factors that influence the adoption and integration of emerging technologies in distance education. Whether as a result of technological advances, changing mindsets, or economic and organizational pressures, this book provides expert advice on how educators can launch effective and engaging distance education initiatives. It goes beyond the hype surrounding Web 2.0 technologies and highlights the important issues that researchers and educators need to consider to enhance educational practice. George Veletsionos is assistant professor of instructional technology at the University of Texas.

Traces the development of educational technology from its inception in the 1960s to the present in the fields of engineering, science, and audiovisual education. The author discusses the theory of educational technology and shows how the field has evolved and been systematized over the decades.

The SAGE Encyclopedia of Educational Technology examines information on leveraging the power of technology to support teaching and learning. While using innovative technology to educate individuals is certainly not a new topic, how it is approached, adapted, and used toward the services of achieving real gains in student performance is extremely pertinent. This two-volume encyclopedia explores such issues, focusing on core topics and issues that will retain relevance in the face of perpetually evolving devices, services, and specific techniques. As technology evolves and becomes even more low-cost, easy-to-use, and more accessible, the education sector will evolve alongside it. For instance, issues surrounding reasoning behind how one study has shown students retain information better in traditional print formats are a topic explored within the pages of this new encyclopedia. Features: A collection of 300-350 entries are organized in A-to-Z fashion in 2 volumes available in a choice of print or electronic formats. Entries, authored by key figures in the field, conclude with cross references and further readings. A detailed index, the Reader's Guide themes, and cross references combine for search-and-browse in the electronic version. This reference encyclopedia is a reliable and precise source on educational technology and a must-have reference for all academic libraries.

information and communicate. In the 21st century, technology plays a role in every facet of education as students, teachers and administrators turn to their computers to access information, create and express themselves, communicate and collaborate, and track the achievement of learning outcomes.

Some of today's educational experts were asked to envision the year 2020, when technology has assumed a major role in elementary and secondary education. The informed conjecture that followed is contained in this volume; contributors offer visions of the future as well as specific steps that could turn those visions into realities. Innovative ideas for research, development, hardware, software, teacher training, technical assistance, organizational and cultural change are offered as a means to illuminate the potential role of technology in the educational systems of tomorrow. *Technology in Education* is a thought-provoking statement of what can and should be done to advance the application of technology to education over the next few decades. As such, it should be read by all researchers and professionals in educational technology.
