The Seventh International Conference on Electrostatics was held at St Catherine's College, Oxford, from 8-10 April 1987. The conference attracted delegates from no fewer than 16 countries and over 50 papers were presented. These proceedings contain 57 invited and contributed papers, including the Bill Bright Memorial Lecture which opened the conference. The proceedings are arranged in several sections which reflect the organisation of the conference: applications; hazards, simulation and fundamentals (poster session); electrostatic damage and related effects; hazards; applications, measurements and testing (poster session); and measurements and fundamentals. Transcription of the discussions which took place after each session are also included. These proceedings therefore provide a valuable overview of the most recent developments in electrostatics and point the way towards areas of future research.
