tool to mitigate
logistical problems
that often follow
disasters or

core of this guide is
the role of human
factors in
emergency

management. The
handbook provides
a systematic
structure for

topics such as
evacuation planning,
chemical agent

is complicated and involves various emotional, sentimental, reactive, and chaotic responses. This is the time that a structured communication model is most needed. Having a guiding model for emergency response can help

put things in proper focus. This book provides that model. It guides you through planning for and responding to various emergencies and in overcoming the challenges in these tasks.

Access Free Emergency

This new guide describes the application of spatial technology to improve disaster risk management (DRM) within the aquaculture sector. DRM requires interrelated actions and activities to ensure early warning, prevention,

Access Free

Emergency

Preparedness,
response and
recovery for a wide
range of natural,
technological and
complex disasters
that can impact
aquaculture
operations and
livelihoods. Spatial
technology refers
to systems and
tools that acquire,
manage and analyse

Access Free Emergency

data that have
geographic context.
Some of the
technologies include
satellite remote
sensing, aerial
surveys, global
positioning
systems,
geographic
information
systems,
information and
communication

Access Free

Emergency

technology and other data gathering sensors used, for instance, in meteorology.

Spatial technology supports activities across all phases of the DRM cycle and its rapid development provides enhanced opportunities to support DRM within

Access Free Emergency

the aquaculture
sector. This guide
is organized in two
parts. Part one is
the “ guidance ” ; it is
the main body of
the document and
describes the
processes and
steps for the use of
spatial technology
within DRM for
aquaculture. Part
two includes

Access Free Emergency

selected country case studies from Bangladesh, the Gulf of Mexico and the Caribbean, and Indonesia to illustrate the application of spatial technology in DRM for aquaculture at the national level within local contexts. Best practices at the

Access Free Emergency

Preparation
Guide 2014

farm and area management levels, supported by spatial technology, reduce volatility and risks and thus facilitate investment.

Countries that would like aquaculture to grow sustainably and reliably are encouraged to use this guide in order

Access Free Emergency

to support spatial
planning approaches
and protect
responsible
investors. A

version

publication.
