Engineering Physics. The concepts of physics are explained in the simple language so that the average students can also understand it. This edition is thoroughly revised as per the latest syllabi followed in the technical universities. **NEW TO THIS EDITION** • Chapters on: – Material Science – Elementary Crystal Physics • Appendix on semiconductor devices • Several new problems in various chapters • Questions asked in recent university examinations **KEY FEATURES** • Gives preliminaries at the beginning of the chapters to prepare the students for the concepts discussed in the particular chapter. • Provides a large number of solved numerical problems. • Gives numerical problems and other questions asked in the university examinations for the last several years. • Appendices at the end of chapters

supplement the textual material.

This book aims at providing a complete coverage of the needs of First Year students as per S.B.T.E's. revised syllabus. The entire revised syllabus has been covered keeping in view the non-availability of the complete subject matter through a single source. The difficult articles have been explained in a simple language providing, wherever necessary, neat and well explained diagrams so that even an average student may be able to follow it independently. A sufficient number of solved examples and problems with answers and SBTE questions are given at the end of each topic. Formulae specifying symbol meaning are enlisted before solving the examples.

This book is the result of more than ten years of research and teaching in the field of quantum electronics. The purpose of the book is to introduce the principles of lasers, starting from elementary notions of quantum mechanics and electromagnetism. Because it is an introductory book, an effort has been made to make it self contained to minimize the need for reference to other works. For the same reason; the references have been limited (whenever possible) either to review papers or to papers of seminal importance. The organization of the book is based on the fact that a laser can be thought of as consisting of three elements: (i) an active material, (ii) a pumping system, and (iii) a suitable resonator. Accordingly, after an introductory chapter, the next three

chapters deal, respectively, with the interaction of radiation with matter, pumping processes, and the theory of passive optical resonators.

For the first year students of B.E./B.Tech/B.Arch. and also useful for competitive Examinations. A number of problems are solved. New problems are included in order to expedite the learning process of students of all hues and to improve their academic performance. Each chapter divided into smaller parts and subheading are provided to make the reading a pleasant journey

Strictly according to the syllabus (2012-2013) if Rajiv Gandhi Proudyogiki Vishvidayala, Bhopal (M.P).
