An analysis of the role and influence of scientists at the agenda-setting, legislative, and implementation stages of environmental policy making. Scientists often bring issues to the policy agenda, translating scientific questions into everyday language and political terms. When Roger Revelle characterized Earth as a spaceship in testimony to Congress in 1957, his evocative language framed the issue of our planet's climate vulnerability in a way that technical discourse could not. In this book, Ann Campbell Keller examines the influence of scientists on environmental policymaking and makes the novel argument that scientists' adherence to the role of neutral advisor varies over the course of the policymaking process. Keller divides the policy process into three stages--agenda setting, legislation, and implementation--and compares scientists' influence on acid rain and climate change policy at these different stages over the course of several decades. She finds that scientists face more pressure to uphold the ideal of objectivity as policy-making processes advance and become more formalized, and thus are more likely to engage in advocacy and persuasion in the earlier, less formal, agenda-setting stage of the process. In the later, more structured legislative and implementation phases, scientists--working hard to give the appearance of neutral expertise--cede the role of persuader to others. Keller draws on theoretical work in political science and science studies and on empirical evidence from scientific reports, news coverage, congressional hearings, and interviews. Focusing on comparable cases and considering scientists' participation in them over time, she offers unique insights into how the context of decision making affects scientists' policy influence and emphasizes the multiple pathways by which scientific meaning is constructed in public settings.

Primarily intended as a text for undergraduate students of engineering for their core course in environmental studies, this book gives a clear introduction to the fundamental principles of ecology and environmental science and aptly summarizes the relationship between ecology and environmental engineering. Divided into three parts, the book begins by discussing the biosphere, natural resources, ecosystems, biodiversity, and community health. Then it goes on to give detailed description on topics such as pollution and control, environmental management, and sustainable development. Finally, it focuses on environmental chemistry, environmental microbiology, and monitoring and analysis of pollutants.

Environmental Studies by Dr Narendra Mal Surana and Mrs Hemlata Ojha Malviya is a publication of the SBPD Publishing House, Agra. Environmental science has become the most popular subject in the world nowadays. The whole world is facing the threat of imbalance in the environment such as overexploitation of nature and natural resources, deforestation, industrialisation and urbanisation. Our ancient scriptures and literature are the witness of awareness and conservation instinct about the environment at that time. The subject environmental studies has become the part of syllabus of the Degree courses after the issuing of an order by the Hon'ble Supreme Court to create awareness among the students. This book has been written according to the unified syllabus issued by U.G.C. for all universities and colleges in India. The authors' are very satisfied to say that the book contains all the latest information and data, which will be useful for the young generation. The authors' are proud to incorporate some more chapters viz. Chapter 2–The Vedic Description and Religious Aspect of Environment, Chapter 3–Current Status of Environment in India and Chapter 10-A Threat to 21st Century AIDS. Attention has also been drawn to provide more and more questions, objective type questions etc. to the students for their examination point of view.
