This volume focuses on the collection of waste and waste streams as an integral aspect of sustainable waste management. The authors take economic models and behavioral studies into account to go beyond just descriptions of waste collections technologies and collection route design. Models and tools for sustainable waste collection are described in detail, and the authors provide a comprehensive, integrated methodology to design waste collection systems that reduce environmental impacts, are economically viable, and achieve buy-in and participation from target populations. Part I of the book provides fundamentals and context on waste hierarchy, including waste prevention, reduction and reuse, waste collection itself, and steps such as preparation for recycling, recycling, treatment, and landfilling. Background in environmental, social, and economic concerns surrounding waste collection is also provided here. Part II addresses tools for design, operation, and maintenance of waste collection systems. Part III focuses on how the tools presented in Part II can be used to support sustainability assessments and decisions that consider the entire life cycle of waste and the role of waste collection programs in waste prevention, reduction, reuse, recycling, treatment, and disposal. Part IV addresses the challenges of developing sustainable waste management systems and addresses the role of waste collection in sustainable waste management in the future.

Stable, higher income democracies often gave both a strong middle class and relatively low levels of inequality. Lower and middle income countries with highly unequal patterns of income distribution and stratified social structures often

Acces PDF Etica Profesional Alfredo Barquero Corrales

have a weak middle class, more social conflict and a tendency to populist and/or authoritarian politics. This publication investigates, for a sample of more than 120 countries, some empirical correlations between the size of a middle class and the following set of variables: the level (mean) of per capita income and wealth, the degree of inequality (Gini coefficients) of per capita income and wealth, the level and composition of public expenditure, the share of small and medium size enterprises in employment and output and an indicator of democracy.

Both in the Asia Pacific region and in Latin America, considerable confusion surrounds the concept of 'open regionalism' and casts doubt on its relevance for practical purposes. This study surveys the literature on the subject.

The publication examines the main characteristics of Argentine manufacturing industry and the development phases (going back more than a century), especially, concentrates on its structural features during the 1980s and on the changes that have occurred since the Convertibility Plan was introduced - between 1991 and 2001 - the most recent transformations between 2002 and 2006 and, finally, in the last section it analyses the possibilities of strengthening the development of competitiveness and the ways to industrial development.
