5 out of 5 stars 55. For many of us, Excel is nothing more than a basic spreadsheet, something we may use on the odd occasion, but for some, it is part of our daily lives. The basis of Excel lies in formulas and functions, used for storing data and retrieving it, for doing calculations, and for analyzing data, and is all in one simple grid format. It is these formulas and functions that provide the biggest headaches for inexperienced users and that is what my guide is all about.

The question on everyone's mind will be, what is the future of Excel and VBA macros in this fast-changing world of technology? Well, rest assured that Excel VBA macros will be here until you are retired. Microsoft is aware that there are millions of organizations out there that depend on millions of macros made via Excel. They might have changed to other languages but those VBA macros will work for them no matter, for many decades to come on the PC and the Mac. The reason for this confidence is that Microsoft still supports Excel 4 macros after 20 years since they became functionally outdated. Excel 4 comes with a primitive macro language which was introduced in August 1992 but was taken out of action by VBA in the next version Excel 5 in June 1994. Excel 4 was not used by many people for programming because it was not very user-friendly. But those programs still ran in Excel 2016 as Microsoft knew that many companies still depended on them. Microsoft has now decided that VBA is not to be extended to a platform that already does not have it. Therefore there will not be any macros for the iPhone, iPad or Android devices. Rather they are developing a macro language which is based on JavaScript and it is to be extended to Windows, Mac, Android, iOS and Excel Online. You may start building macros by using JavaScript even now but it will not be fun as they still do not have a macro recorder, objects, methods, and properties. It is still incomplete and evolving with a syntax that is not user-friendly and less readable than VBA. Another problem is that JavaScript does not support 2D arrays. You need to use arrays of arrays instead. This language runs asynchronously, therefore, you will have to design the code yourself. And it is slow but, if you are looking for a macro to run on the iPad, this is the path to take going forward. Grab this book today and enrich your Excel Macros expertise!

Heads up - it's the twenty-first century! It's easier than ever to make your own gadgets. The Arduino is a hardware and software package that allows you to create your own gadgets from scratch. It's essentially a microcomputer that you can hook all sorts of neat things up to and that you can make full-fledged projects out of. Programming your Arduino projects isn't terribly difficult, but there are a lot of underlying concepts that you need to grasp if you really want to propel yourself forward as a programmer. You're going to be working with pretty low-level concepts, so it's important that you familiarize yourself with all of these before you jump into Arduino programming.
