Human life, in all its manifestations, has immeasurable social and economic value. Since ancient times, human beings have tried to put in place systems to sustain and flourish in the face of adversity. In modern times, life insurance is one such financial arrangement that provides social and economic security to

individuals and to the communities. Awareness of the basic features and categories of insurance is important in today's life insurance market where all companies are offering a number of innovative products with multiple features. Divided into three parts, this book incorporates the basics of life insurance, risk management, and health and micro-insurance, in detail. Part I (Concepts, Principles and Processes) systematically defines life insurance, its legal contract and characteristics, marketing and distribution processes involved, and the future trends. Part II (Risk Management, Underwriting, Reinsurance and Claims) explicates the importance of risk management, the process of underwriting, and the types and concepts of reinsurance and claims. Part III (Employee Benefits,

which is a pervasive phenomenon in our lives. We can sometimes avoid or reduce it but never entirely eliminate it. Whether you are a Graduate student who is studying insurance as a part of your curriculum, or an Executive managing your Organization's Insurance and Risk Management Program this book will provide you with a strong conceptual foundation, comprehensive knowledge of non-life and life insurance products, and perspectives on how insurance functions as a part of the economy. Essentially, you will understand 'why' it is needed, 'what' solutions it provides, and 'how' different business processes and professionals work together to deliver the vital compensation to victims of disasters. Organized in 18 chapters that are comprehensive yet brief, it

continuously relates facts to theories, concepts to processes, events to their context, and the rule-of-thumb to underlying basic principles. Thus, insurance will be demystified, and you will be empowered to decode 'insurance speak.'

The aim of the book is to provide an overview of risk management in life insurance companies. The focus is twofold: (1) to provide a broad view of the different topics needed for risk management and (2) to provide the necessary tools and techniques to concretely apply them in practice. Much emphasis has been put into the presentation of the book so that it presents the theory in a simple but sound manner. The first chapters deal

with valuation concepts which are defined and analysed, the emphasis is on understanding the risks in corresponding assets and liabilities such as bonds, shares and also insurance liabilities. In the following chapters risk appetite and key insurance processes and their risks are presented and analysed. This more general treatment is followed by chapters describing asset risks, insurance risks and operational risks - the application of models and reporting of the corresponding risks is central. Next, the risks of insurance companies and of special insurance products are looked at. The aim is to show the intrinsic risks in some particular products and the way they can be analysed. The book finishes with emerging risks and risk management from a regulatory point of view, the

standard model of Solvency II and the Swiss Solvency Test are analysed and explained. The book has several mathematical appendices which deal with the basic mathematical tools, e.g. probability theory, stochastic processes, Markov chains and a stochastic life insurance model based on Markov chains. Moreover, the appendices look at the mathematical formulation of abstract valuation concepts such as replicating portfolios, state space deflators, arbitrage free pricing and the valuation of unit linked products with guarantees. The various concepts in the book are supported by tables and figures.
