It provides an accessible and efficient learning experience for students regardless of their current level of proficiency.

Physical Activity and the Abdominal Viscera is the first book to examine the response of the visceral organs to acute and chronic physical activity, in cases of both health and disease. Bringing together a previously disparate body of research, Professor Roy Shephard sets out the physiology, function during exercise, pathology of disease, and role of physical activity in preventing and managing disease in the visceral organs. Working systematically through the viscera, the book first identifies the response to exercise and pathologies of the liver, gall bladder and biliary tract, then goes on to examine the function of the kidneys and bladder, and finally covers issues including the spleen, sickle cell disease and prostate cancer. Providing a clear and well-structured guide to the relationship between the visceral organs and physical activity, Physical Activity and the Abdominal Viscera is a vital reference text for academics and upper-level students in sports medicine and clinical exercise physiology, and for health professionals in preventive medicine.

The book presents a comprehensive study of important topics in Mechanics of pure and applied sciences. It provides knowledge of scalar and vector in optimum depth to make the students understand the concepts of Mechanics in simple, coherent and lucid manner and grasp its principles & theory. It caters to the requirements of students of B.Sc. Pass and Honours courses. Students of engineering disciplines and the ones aspiring for competitive exams such as AIME and others, will also find it useful for their preparations.
