John Berger's writings on photography are some of the most original of the twentieth century. This selection contains many groundbreaking essays and previously uncollected pieces written for exhibitions and catalogues in which Berger probes the work of photographers such as Henri Cartier-Bresson and W. Eugene Smith - and the lives of those photographed - with fierce engagement, intensity and tenderness. The selection is made and introduced by Geoff Dyer, author of the award-winning The Ongoing Moment. How do we see the world around us? This is one of a number of pivotal works by creative thinkers whose writings on art, design and the media have changed our vision for ever. Understanding a Photograph John Berger Edited and introduced by Geoff Dyer

Learn to ask better, more helpful questions of your work so that you can create stronger and more powerful photographs.

Photographers often look at an image—one they ' ve either already created or are in the process of making—and ask themselves a simple question: " Is this a good photograph? " It ' s an understandable question, but it ' s really not very helpful. How are you supposed to answer that? What does " good " even mean? Is it the same for everyone?

What if you were equipped to ask better, more constructive questions of your work so that you could think more intentionally and creatively, and in doing so, bring more specific action and vision to the act of creating photographs? What if asking stronger questions allowed you to establish a more effective approach to your image-making? In The Heart of the Photograph: 100 Questions for Making Stronger, More Expressive Photographs, photographer and author David duChemin helps you learn to ask better questions of your work in order to craft more successful photographs—photographs that express and connect, photographs that are strong and, above all, photographs that are truly yours.

From the big-picture questions—What do I want this image to accomplish?—to the more detail-oriented questions that help you get there—What is the light doing? Where do the lines lead? What can I do about it?—David walks you through his thought process so that you can establish your own. Along the way, he discusses the building blocks from which compelling photographs are made, such as gesture, balance, scale, contrast, perspective, story, memory, symbolism, and much more. The Heart of the Photograph is not a theoretical book. It is a practical and useful book that equips you to think more intentionally as a photographer and empowers you to ask more helpful questions of you and your work, so that you can produce images that are not only better than " good, " but as powerful and authentic as you hope them to be.

PART FOUR: BETTER PHOTOGRAPHS

The Heart of the Photograph
Index

An art appreciation introduction to photography helps readers gain a deeper understanding of great photographers and their work in a richly illustrated resource that includes biographical profiles of more than one hundred major photographers, including Stieglitz, Cartier-Bresson, and Evans--along with a history of the medium, essential styles and movements, and techniques.

In *Scenes in a Library*, Carol Armstrong explores the experimental moment, at the inception of the new medium, when the word came to haunt the photographic image and the forty or so years - roughly from the 1840s to the 1880s - during which the photographic image alternately resisted and became assimilated by the printed page.

Written by renowned photographer, author, and broadcaster Tom Ang, this book delivers exactly what the title promises and tells you how to photograph absolutely everything. Avoiding intimidating technical jargon, Tom explains the basic elements of photography - light, color, composition, and focus - then goes on to show how to make them work for you. From still lifes to children's parties, thunderstorms to sunsets, close-ups to panoramas, every photographic subject, technique, and challenge is covered. Using step-by-step photographs and instructions, Tom shows you how to take the best possible picture in any situation. Want to photograph city lights at night, animals in action, a family portrait? Tom makes it easy. Employing a user-friendly "recipe" formula, he shows you the best approach for each subject, gives expert tips on improving an image, and tells you how to set up your camera - so you really can't go wrong. Inspiring galleries at the end of each section describe alternative techniques to try for every subject. There are also tips on basic post-production, showing how to crop, improve color and contrast, and remove unwanted elements of an image. *How to Photograph Absolutely Everything* guarantees to make a better, more confident photographer of absolutely everyone who reads it.

Winner of the National Book Critics' Circle Award for Criticism. One of the most highly regarded books of its kind, "On Photography" first appeared in 1977 and is described by its author as " a progress of essays about the meaning and career of photographs." It begins with the famous " In Plato' s Cave" essay, then offers five other prose meditations on this topic, and concludes with a fascinating and far-reaching " Brief Anthology of Quotations."

We all have moments we wish we could relive. We ' d give anything to skid down the toboggan hills of our youth, to breathe in the smell of our children as babies or to spend just one more minute with a loved one we ' ve lost. *Dear Photograph* provides a way to link these memories from the past to the present. The idea is simple: hold a photograph from the past up in front of the place where it was originally taken; take a second photograph; add a sentence of dedication about what the photograph means to you. The results, however, are astounding, which is why millions have flocked to the site, and thousands have submitted their own *Dear Photographs*. This stunning visual compilation includes more than 140 never-before-seen *Dear Photographs*. By turns nostalgic, charming and poignant, *Dear Photograph* evokes childhood memories, laments difficult losses and, above all, celebrates the universal nature of love.

Organized by ICP Curator Carol Squiers, "What Is a Photograph?" will explore the intense creative experimentation in photography that has occurred since the 1970s. Conceptual art introduced photography into contemporary art making, using the medium in ways that challenged it artistically, intellectually, and technically and broadened the notion of what a photograph could be in art. A new generation of artists began an equally rigorous but more aesthetically adventurous analysis, which probed photography itself - from the role of light, color, composition, to materiality and the subject. "What Is a Photograph?" brings together these artists, who reinvented photography.
