Invasion ecology is the study of the causes and consequences of the introduction of organisms to areas outside their native range. Interest in this field has exploded in the past few decades. Explaining why and how organisms are moved around the world, how and why some become established and invade, and how best to manage invasive species in the face of global change are all crucial issues that interest biogeographers, ecologists and environmental managers in all parts of the world. This book brings together the insights of more than 50 authors to examine the origins, foundations, current dimensions and potential trajectories of invasion ecology. It revisits key tenets of the foundations of invasion ecology, including contributions of pioneering naturalists of the 19th century, including Charles Darwin and British ecologist Charles Elton, whose 1958 monograph on invasive species is widely acknowledged as having focussed scientific attention on biological invasions.

Integrated History and Philosophy of Science (iHPS) is commonly understood as the study of science from a combined historical and philosophical perspective. Yet, since its gradual formation as a research field, the question of how to suitably integrate both perspectives remains open. This volume presents cutting edge research from junior iHPS scholars, and in doing so provides a snapshot of current developments within the field, explores the connection between iHPS and other academic disciplines, and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS.

Current research fields in science and technology were presented and discussed at the EKC2008, informing about the interests and directions of the

scientists and engineers in EU countries and Korea. The Conference has emerged from the idea of bringing together EU and Korea to get to know each other better, especially in fields of science and technology. The focus of the conference is put on the topics: Computational Fluid Dynamics; Mechatronics and Mechanical Engineering; Information and Communications Technology; Life and Natural Sciences; Energy and Environmental Technology.

One of the greatest challenges facing modern global health is how to include the most marginalized and impoverished people in international efforts to promote social and economic development. In *Disability and International Development* disability rights are situated within the broader context of global health and the need for much greater inter-sector collaboration. Reports from a broad cross-section of low- and middle-income countries—locales as diverse as Zimbabwe, Bolivia, Kyrgyzstan, and Papua New Guinea—move beyond surface discussions of "what is working" and "what shows promise" to discuss political and governance contexts, the roles of disabled persons in research by outsiders, concurrent struggles (e.g., women's or children's rights), and instructive inroads made by community activists and national Disabled People's Organizations. The results are provocative, and offer new lenses for viewing both the issues and the populations they affect. Each of the book's chapters spotlights a topic as representative of the enormity and immediacy of challenges to inclusive global health, including: The impact of international human rights law on domestic law and local traditions. The effect of failed states on the lives of people with disabilities. Empowerment and advocacy: disability organizations and movements. HIV/AIDS interventions with disabled persons. Assistive technologies in low-income countries. Strategies for improving the lives of children with disabilities. Cross-disciplinary as well as cross-cultural, *Disability and International Development* will attract a wide audience of professionals in rehabilitation, social welfare and human rights; governmental and non-governmental organizations and disabled people's organizations; researchers and practitioners. It will also be relevant to those working in health and welfare administration, health policy, international aid and development, and human rights. In addition, graduate students in disability studies, public and global health and international development should find this an important guide to the future of these fields.

In recent years, our world has experienced a profound shift and progression in available computing and knowledge sharing innovations. These emerging advancements have developed at a rapid pace, disseminating into and affecting numerous aspects of contemporary society. This has created a pivotal need for an innovative compendium encompassing the latest trends, concepts, and issues surrounding this relevant discipline area. During the past 15 years, the Encyclopedia of Information Science and Technology has become recognized as one of the landmark sources of the latest knowledge and discoveries in this discipline. The Encyclopedia of Information Science and Technology, Fourth Edition is a 10-volume set which includes 705 original and previously unpublished research articles covering a full range of perspectives, applications, and techniques contributed by thousands of experts and researchers from around the globe. This authoritative encyclopedia is an all-encompassing, well-established reference source that is ideally designed to disseminate the most forward-thinking and diverse research findings. With critical perspectives on the impact of information science management and new technologies in modern settings, including but not limited to computer science, education, healthcare, government, engineering, business, and natural and physical sciences, it is a pivotal and relevant source of knowledge that will benefit every professional within the field of information science and technology and is an invaluable addition to every academic and corporate library.
