Authors:- Jacqueline Martin LLM has ten years' experience as a practising barrister and has taught law at all levels. - Nicholas Price is an experienced teacher of Law and an A-Level Law textbook author.

Winner - Primary Textbook series 2009"" A whole school grammar program with a strong context-based approach to teaching and learning... Each unit is well thought out with a clear instructional design, starting with a model text and culminating in the students writing a text to put their new grammatical knowledge into practice.""Australian Educational Publishing AwardsGrammar gets realThis practical book is part of a highly anticipated and outstanding new series that introduces and teaches

BPP Learning Media's ICFE Workbook is the ideal companion to assist students with technical English learning and to gain certification of their abilities which are recognised by thousands of educational organisations and employers worldwide.

Featuring remarkable people communicating passionately and persuasively, TED Talks provide the ELT classroom with inspiring ideas and an unparalleled source of authentic language input.

A practical reference guide to help teachers to predict and understand the problems their students have.

The perennial favourite for Foundation and KS1 book boxes

Master storyteller P.W. Catanese begins the Books of Umber trilogy with Happenstance Found—now available in paperback—when twelve-yearold Happenstance awakens in a cave with no memory of who he is or how he came to be there. Lord Umber and his companions rescue Hap, and the group sets out on dangerous and unusual missions that continue in Dragon Games. Hap's and Umber's journeys take them to the corrupt kingdom of Sarnica, where Umber's nemesis has acquired some dragon eggs. Umber wants to study a new magical species, but what starts as a quest for knowledge turns into a dangerous rescue operation. The debt plotting of these actionpacked, heart-stopping adventures will pique the imagination and leave readers anxious for the final installment.

Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.
