Modulations Part 1 *Key Modulation Chart*
Common Chord Modulation moves from the original key to the destination key (usually a closely related key) by way of a chord both keys share. We can continue to use “ Save Me ” by Queen as our example, as it modulates from G Major to D Major with a G Major chord.

Modulation consists in changing from one Key to another. To do that, it is common to use a Pivot Chord, which is a chord that belongs to both keys, and then the new key is affirmed by a Cadence, which may consist, simply, in the chords V7 I. In this presentation, an explanation is given on how to obtain the pivot chords between two keys, using the

dominant chord, and is the tonic of the new key. The “B” is also shared by both keys as well as the “A” which is the seventh of the dominant in the new key. The modulation of a perfect fourth above is the easiest of all because you are merely changing the I chord of the first key to the V chord of the second key.

Following is a corresponding chart of the common chords that can be used when modulation from a minor key (A minor used in the example). Again, I've taken the minor keys in their harmonic form. This chart shows that the availability of common chords is more limited than it is for modulations from the major key.

Modulation Basics - Harmony

Modulation describes the process where a piece of music changes from one key to another key.. When you start writing a piece of music one of the first things you do is choose a key to compose in. This choice of key determines the scale you use, how many sharps and flats there are and what chords you can use. This key is sometimes called the “home key”.

flat; then A flat; next D flat; then G flat. This is the natural key modulation process. This natural order of flats is a perfect way to modulate from one key to another. It is logical and sounds pleasant to the ear. Modulation becomes a problem, though, if you need to move to another key out of order.

Modulation: Traveling Smoothly from Key to Key

In the examples below, an F chord (F, A, C) would have a total of 12 potential keys to which it could modulate. They are A major, C major, F minor, F# minor, Ab major, Bb major, Bb minor, C minor, C major, D major and D minor. In the example below, the common tone between the keys of F major and A major is A. 3.

Hi Leah! Literally came across your blog a few minutes ago by way of another piano blog (gotta love this network!). Aside from teaching piano I also play at church! THANK YOU for the modulation formula! The only type of modulation I used to do was between say a 3rd and 4th stanza, and transposing up a whole key (i.e., F-G Major).

Piano Playground: Easy Modulation For Church Pianists

Direct modulation is like jumping from the home key to the destination key. Common chord modulation is like stepping one foot into the destination key before the other. Common chord modulation is a great method of moving from one key to another, without drawing much attention. Unlike direct modulation, it can often go unnoticed by the untrained ...

The Art of Modulation, Part 2: Common Chord Modulation ...

In music, modulation is the change from one tonality (tonic, or tonal center) to another. This may or may not be accompanied by a change in key signature. Modulations articulate or create the structure or form of many pieces, as well as add interest. Treatment of a chord as the tonic for less than a phrase is considered tonicization.. Modulation is the essential part of the art.

2Often a modulation will move to a closely related key. A closely related key is any key adjacent on the circle of fifths. Another way to determine closely related keys is to add or remove a sharp or flat from the key signature. For instance, if the original key is E major, removing a sharp will create the key of A major and adding

This book is Schoenberg's last completed theoretical work and represents his final thoughts on the subject of classical and romantic harmony. The earlier chapters recapitulate in condensed form the principles laid down in his 'Theory of Harmony'; the later chapters break entirely new ground, for they analyze the system of key relationships within the structure of whole movements and affirm the principle of 'monotonicity,' showing how all modulations within a movement are merely deviations from, and not negations of, its main tonality.

Any musician who composes or transcribes music or who plays accompaniment to a soloist will have a need to know what the chords are for the accompaniment. There are also occasions when the published chords to a piece are in error, and there is a need to know how to recognize and correct them. Simply put, the process of harmonizing chords to melody is all about identifying chord tones and intervals in a melody and determining the chords they imply. The decision to survey the literature on harmonizing chords was made because no single textbook on harmony could be found that extensively treated the subject. Of the scores of textbooks referenced herein, each one would touch upon or tell only part of the story. What was obviously needed was a book that gathered all the relevant materials in one place and outlined a practical procedure for

harmonizing a melody. This document attempts to do this. The word harmonization as used here refers to the process of finding appropriate chords to accompany a melody. Hence, when we harmonize a melody, we create a chord accompaniment for it. The most beautiful melody may be ruined by a poor and inappropriate chord accompaniment, or a poor melody can be made interesting by an apt chord accompaniment. The intended purpose of this work is to provide suitable accompaniment chords only to a given melody in lead sheet format. The piece could then be performed by musicians playing the melody and chords together. This could be done either by two musicians, a soloist, and an accompanist or by a keyboard player who would play both melody and chords. It is not intended that a harmonizing bass line or other harmonizing voices be added to the given

melody. It is also a primary purpose of this work to enable the transformation of raw melody into diatonic music by harmonizing only diatonic chords to it.
