This book presents a compact study on recent concepts and advances in biomedical engineering. The ongoing advancement of civilization and related technological innovations are increasingly affecting many aspects of our lives. These changes are also visible in the development and practical application of new methods for medical diagnosis and treatment, which in turn are closely linked to expanding knowledge of the functions of the human body. This development is possible primarily due to the increasing cooperation of scientists from various disciplines, and related activities are referred to as "biomedical engineering." The combined efforts of doctors, physiotherapists and engineers from various fields of science have helped achieve dynamic advances in medicine that would have been impossible in the past. The reader will find here papers on biomaterials, biomechanics, as well as the use of information technology and engineering modeling methods in medicine. The respective papers will promote the development of biomedical engineering as a vital field of science, based on cooperation between doctors, physiotherapists and engineers. The editors would like to thank all the people who contributed to the creation of this book – both the authors, and those involved in technical aspects.

Featuring coverage on a broad range of topics such as motivational strategies, learning assessment, and student involvement, this book is geared toward academicians, researchers, and students seeking current research on the importance of maintaining ambition among learners in digital classrooms.

This evaluation examines the relevance and effectiveness of Poverty Reduction Support Credits (PRSCs), introduced by the Bank in early 2001 to support comprehensive growth, improve social conditions, and reduce poverty in IDA countries. PRSCs were intended to allow greater country-ownership, provide more predictable annual support, exhibit more flexible conditionality, and strengthen budget processes in a results-based framework. By September 2009, the Bank had approved 99 PRSCs totaling some \$7.5 billion and representing 38% percent of IDA policy based lending. The evaluation finds that in terms of process, PRSCs were effective in easing conditionality, increasing country ownership and aid predictability, stimulating dialogue between central and sectoral ministries, and improving donor harmonization. In terms of content, PRSCs succeeded in emphasizing public sector management and pro-poor service delivery. Yet in terms of results, it is difficult to distinguish growth and poverty outcomes in countries with PRSCs from other better performing IDA countries. There is scope for further simplifying the language of conditionality and underpinning PRSCs with better pro-poor growth diagnostics. PRSCs can also strengthen their results frameworks and limit sector policy content in multi-sector DPLs to high-level or cross-cutting issues. Today, Bank policy has subsumed PRSCs under the broader mantle of Development Policy Lending and the rationale for a separate brand name although differences linger from the past. Since PRSCs and other policy-based lending have gradually converged in design, remaining differences compared to other Development Policy Loans should be clearly spelled out, or the separate PRSC brand name should be phased out.

Textiles have been historically and traditionally used to make clothes, but even in ancient times there were technical textiles for making sails, tents, etc. Today, technical textiles are used in various industries for a host of purposes and applications. Recently, there have been exciting developments on various fronts in the textile field to impart novel and innovative functionalities to textiles, e.g., easy-to-clean or dirt-repellent, flame retardancy, anti-bacterial, and fog-harvesting properties, to name a few. Also, textiles for electronics based on graphene, CNTs and other nanomaterials, conductive textiles, textiles for sensor function, textile-fixed catalysts, textiles for batteries and energy storage, textiles as substrates for tissue engineering, and textiles for O/W separation have appeared in the literature. All this has been possible through adopting novel ways for finishing textiles, e.g., by appropriate surface modification techniques, and utilizing biomimetic concepts borrowed from nature. This unique book entitled " Textile Finishing: Recent Developments and Future Trends " is divided into four parts: Part 1: Recent Developments/Current Challenges in Textile Finishing; Part 2: Surface Modification Techniques for Textiles; Part 3: Innovative Functionalities of Textiles; Part 4: Fiber-Reinforced Composites. The topics covered include: Antimicrobial textile finishes; flame retardant textile finishing; " self-cleaning " or easy-to-clean textiles; metallization of textiles; atmospheric pressure plasma, and uv-based photochemical surface modification of textiles; tunable wettability of textiles; 3D textile structures for fog harvesting; textile-fixed catalysts; medical textiles as substrates for tissue engineering; and fiber-reinforced " green " or " greener " biocomposites and the relevance of fiber/matrix adhesion.
