Strategic Management in Public Services Organizations takes a comparative and international view on the appropriate use of strategic management models that are affecting the way public services organizations are managed. In an era of New and post New Public Management reforms, public managers at all levels are expected to respond to these new approaches, which profoundly affect their work practices, skills, and knowledge bases. Choosing a promising strategic management model and implementing it in a way that works for the organization or inter-organizational network in question also depends on an understanding of local politico-administrative and cultural contexts: this book helps the readers identify how to successfully tailor strategic management approaches to their specific circumstances and needs. This second edition builds upon the successes of the well-received first edition. Thoroughly updated to help public managers meet the challenges of a new decade, it has a refreshed collection of mini-cases and now includes chapter summaries. It also includes a new chapter on collaborative strategy and co-creation, in response to the growth of interest in more open forms of public policymaking. This is an advanced textbook aimed at the postgraduate level, particularly students on MPAs and MBAs with a public sector option or MScs in public policy and public management.

This dynamic and beautifully written textbook takes a modern and innovative approach to strategy by placing technology at its heart, bridging the gap between general strategy texts and specialist technology and innovation literature. It addresses the challenges and opportunities presented to organisations by disruptive technological change and takes into account the navigation of uncertain business environments. In addition to examining more established concepts and theories, the text also explores new disruptive business models and non-traditional approaches to strategy development such as effectuation, the Business Model Canvas and prediction logic. This comprehensive and critical approach is supported by a rich assortment of practical examples and cases drawn from different sectors and a range of exciting companies from all over the world, helping students and practitioners to apply theory to practice. This will be an essential core text for modules on technology strategy and innovation at upper undergraduate, postgraduate and MBA levels, and invaluable reading for senior executives and aspiring managers who seek to understand how to implement strategy in a volatile disruptive environment.

Understanding of the theories that underpin international political economy (IPE), and their practical applications, is crucial to the study of international relations, politics, development and economics. This is a comprehensive and accessible introduction to the field, with an engaging and coherent foundation to the subject. It considers traditional and alternative approaches to IPE, and in doing so elucidates key concepts, assumptions and the intellectual and historical context in which they arose and developed. At all times, it makes clear their relevance to issues from trade, finance and government, to environment, technology, health, labour, security, migration, development and culture. The book encourages independent reflection and critical thinking through a range of in-text guiding features. In addition, each chapter presents theoretical analysis alongside contemporary issues, helping the reader to relate to the real world of IPE and to better understand how theory helps inform interpretation of it. New to this edition: comprehensively updated to include key coverage of the post-2015 framework of the Sustainable Development Goals, the financial crisis and international government responses - successful or otherwise - to recent challenges; fully updated data, reflective questions, recommended readings, concept and example boxes, and illustrations; new chapters on health, migration and labour; additional coverage of trade theories and key contemporary issues, such as national versus human security, economic versus human development and illegal networks in global trade.
