How Cars Work is a completely illustrated primer describing the 250 most important car parts and how they work. This mini test book includes wonderfully simple line drawings and clear language to describe all the automotive systems as well as a

glossary, index, and a test after each chapter. How Cars Work provides the basic vocabulary and mechanical knowledge to help a reader talk intelligently with mechanics understand shop manuals, and diagnosis car problems. Tom Newton guides the reader with a one topic per page format that delivers information in bite size chunks, just right for teenage boys. How Cars Work was the most stolen book at Kennedy High School in Richmond California! Teachers like our title and so do librarians. The History channel, Modern Marvels-2000, Actuality Productions, Inc is using How Cars Work to train staff for a documentary on automobiles.

The M.I.T. Introductory Physics Series is the result of a program of careful study, planning, and development that began in 1960. The Education Research Center at the Massachusetts Institute of Technology (formerly the Science Teaching Center) was established to study the process of instruction, aids thereto, and the learning process itself, with special reference to science teaching at the university level. Generous support from a number of foundations provided the means for assembling and maintaining an experienced staff to co-operate with members of the Institute's Physics Department in the examination, improvement, and development of physics curriculum materials for students planning careers in the sciences. After careful analysis of objectives and the problems involved, preliminary versions of textbooks were prepared, tested through classroom use at M.I.T. and other institutions, re-evaluated, rewritten, and tried again. Only then were the final manuscripts undertaken.

For upper-level courses in devices and circuits, at 2-year or 4-year engineering and technology institutes. Highly accurate and thoroughly updated, this text has set the standard in electronic devices and circuit theory for over 25 years. Boylestad offers students a complete and comprehensive survey, focusing on all the essentials they will need to succeed on the job. This very readable presentation is supported by strong pedagogy and content that is ideal for new students of this rapidly changing field. Its colorful, student-friendly layout boasts a large number of stunning photographs. A broad range of ancillary materials is available for instructor support. \*NEW -Over 40 new end-of-chapter practical examples added throughout - Provides an understanding of the design process not normally available at this level. This helps students apply content to real-world situations and makes material more meaningful. \*NEW - Expanded coverage of computer software - Adds coverage of Mathcad to illustrate the versatility of the package for use in electronics - keeping students up to date on a rapidly changing part of the field. \*NEW - Summaries added to the end of every chapter - Uses boldface

You have a great idea, now what? That first mile—where an innovation moves from an idea on paper to the market—is often plagued by failure. In fact, less than one percent of ideas launched by big companies end up having real impact. The ideas aren't the problem. It's the process. The First Mile focuses on the critical moment when an innovator moves from planning to reality. It is a perilous place where hidden traps snare entrepreneurs and roadblocks slow innovators inside large companies. In this practical and enlightening manual, strategic adviser Scott Anthony equips innovators with new tools, questions, and examples to speed through this crucial early stage of innovation. You'll learn: □ How to evaluate your idea's strengths and weaknesses using the "DEFT" process—Document, Evaluate, Focus, and Test □ Fourteen recipes from an "experiment cookbook" to gain confidence in your idea or business □ Why "spinouts," "wrong turns," and other challenges commonly trip up innovation—and the practical strategies you can use to avoid them □ Why innovators need to seek chaos in an age of constant change—and other essential leadership skills Drawing on his decade of experience as an innovation adviser and investor, Anthony describes hard-won lessons from disruptive start-ups and global giants alike. The First Mile will give you the knowledge and confidence to travel this perilous—but ultimately promising—terrain. The first mile can be a scary place, but you don't have to traverse it alone. This book can help.

In Ferdinand Porsche - Genesis of Genius, author Karl Ludvigsen reveals a dynamic young innovator who helped to chart the course of the automobile through the first decades of the twentieth century. As early as 1900, at the age of 25, Ferdinand Porsche pioneered hybrid technology to power his automobile designs. Once gasoline gained dominance as the power-source of choice, Porsche became relentless in his goal to design the fastest and most durable automobiles in Europe. Ferdinand Porsche - Genesis of Genius explores in depth the unique combination of ambition, determination and genius that were the genesis of an automotive dynasty which has continued to thrive and expand for over a century.

This volume contains the proceedings of the Fifth International Conference on Secondary Ion Mass Spectrometry (SIMS V), held at the Capitol Holiday Inn, Washington, DC, USA, from September 30 to October 4, 1985. The conference was the fifth in a series of conferences held biennially. Previous conferences were held in Münster (1977), Stanford (1979), Budapest (1981), and Osaka (1983). SIMS V was organized by Dr. R.J. Colton of the Naval Research Laboratory and Dr. D.S. Simons of the National Bureau of Standards under the auspices of the International Organizing Committee chaired by Prof. A. Benninghoven of the Universität Münster. Dr. Richard F.K. Herzog served as the honorary chairman of SIMS V. While Dr. Herzog is best known to the mass spectrometry community for his theoretical development of a mass spectrometer design, known as the Mattauch-Herzog geometry, he also made several early and important contributions to SIMS. In 1949, Herzog and Viehbock published a description of the first instrument designed to study secondary ions produced by bombardment from a beam of ions generated in a source that was separated from the sample by a narrow tube. Later at the GCA Corporation, he brought together a team of researchers including H.J. Liebl, F.G. Riidenauer, W.P. Poschenrieder and F.G. Satkiewicz, who designed and built, and carried out applied research with the first commercial ion microprobe.
