For Ellen, faith was nonexistent until faith was all she had to cling to. After 24 years together, life partners, Ellen and Paul were married nine months before his passing to the spirit world. When treatments ran out for Paul's dreaded health issues, he confided to Ellen that he was very tired of exotic drugs, daily doctor visits, and feeling terrible. He wanted peace and comfort. So together, they decided hospice was not the only choice but the best choice. Before making the transition to his final reward and eternity, they shared his time going over memorabilia, listening to favorite Big Band music, watching movies, laughing, and telling stories about seashells. Ellen read his Tin Can Sailor magazines aloud, and much time was spent in expressions of love. Ellen stood guard 24/7. Sadly, they were wrong to believe family and lifelong friends would be their support system. Instead, many angels in human form stepped in to give support, camaraderie, and comfort. Ellen, an outspoken believer in science, was presented numerous miracles; miracles that science could not explain. These miracles and the subtle comfort she felt through prayer led to a profound epiphany in belief. The smell of English leather permeating the night air-Paul 's brother used that brand of cologne, but he had been dead for several years. Another incident, Ellen being violently shaken awake, just in time to untangle her beloved from the blanket and side rail. No one else was in the house, so whose hand shook her shoulder? This is Ellen and Paul's intimate hospice journey. The lessons learned are being shared with the deepest of intentions of easing the load of those facing a hospice odyssey of their own.

With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

The research paper "Extinction Risk from Climate Change" published in the journal Nature in January 2004 created front-page headlines around the world. The notion that climate change could drive more than a million species to extinction captured both the popular imagination and the attention of policy-makers, and provoked an unprecedented round of scientific critique. Saving a Million Species reconsiders the central question of that paper: How many species may perish as a result of climate change and associated threats? Leaders from a range of disciplines synthesize the literature, refine the original estimates, and elaborate the conservation and policy implications. The book: examines the initial extinction risk estimates of the original paper, subsequent critiques, and the media and policy impact of this unique study presents evidence of extinctions from climate change from different time frames in the past

explores extinctions documented in the contemporary record sets forth new risk estimates for future climate change considers the conservation and policy implications of the estimates. Saving a Million Species offers a clear explanation of the science behind the headline-grabbing estimates for conservationists, researchers, teachers, students, and policy-makers. It is a critical resource for helping those working to conserve biodiversity take on the rapidly advancing and evolving global stressor of climate change-the most important issue in conservation biology today, and the one for which we are least prepared.

Rapidly evolving computer and communications technologies have achieved data transmission rates and data storage capacities high enough for digital video. But video involves much more than just pushing bits! Achieving the best possible image quality, accurate color, and smooth motion requires understanding many aspects of image acquisition, coding, processing, and display that are outside the usual realm of computer graphics. At the same time, video system designers are facing new demands to interface with film and computer systems that require techniques outside conventional video engineering. Charles Poynton's 1996 book *A Technical Introduction to Digital Video* became an industry favorite for its succinct, accurate, and accessible treatment of standard definition television (SDTV). In *Digital Video and HDTV*, Poynton augments that book with coverage of high definition television (HDTV) and compression systems. For more information on HDTV Retail markets, go to: <http://www.insightmedia.info/newsletters.php#hdtv> With the help of hundreds of high quality technical illustrations, this book presents the following topics: \* Basic concepts of digitization, sampling, quantization, gamma, and filtering \* Principles of color science as applied to image capture and display \* Scanning and coding of SDTV and HDTV \* Video color coding: luma, chroma (4:2:2 component video, 4fSC composite video) \* Analog NTSC and PAL \* Studio systems and interfaces \* Compression technology, including M-JPEG and MPEG-2 \* Broadcast standards and consumer video equipment
