Managerial economics, meaning the application of economic methods in the managerial decision-making process, is a fundamental part of any business or management course. This textbook covers all the main aspects of managerial economics: the theory of the firm; demand theory and estimation; production and cost theory and estimation; market structure and pricing; game theory; investment analysis and government policy. It includes numerous and extensive case studies, as well as review questions and problem-solving sections at the end of each chapter. Nick Wilkinson adopts a user-friendly problem-solving approach which takes the reader in gradual steps from simple problems through increasingly difficult material to complex case studies, providing an understanding of how the relevant principles can be applied to real-life situations involving managerial decision-making. This book will be invaluable to business and economics students at both undergraduate and graduate levels who have a basic training in calculus and quantitative methods.

For upper-level undergraduate and first-year MBA courses in managerial and applied economics. This Global Edition has been edited to include enhancements making it more relevant to students outside the United States This text will excite readers by providing a more linear progression, while proving the consistency and relevance of microeconomic theory. The Seventh Edition welcomes a new co-author, Stephen Erfle of Dickinson College, who has contributed many revisions and improvements to the quantitative sections of the text, as well as provided a major addition: the use of Excel in the presentation of many of the numerical and graphical illustrations presented throughout the text. To strengthen students' ability to use Excel—a critical skill in today's job market—new Excel Applications (Excel Apps) allow readers to turn the static figures and tables in the text into dynamic illustrations.
