Mapping Boston is an exemplar of such creative attentiveness—bringing the history of one of America's oldest and most beautiful cities alive through the maps that have depicted it over the centuries. The book includes both historical maps of the city and maps showing the gradual emergence of the New England region from the imaginations of explorers to a form that we would recognize today.

A lavishly illustrated tour of Boston through its cartography uses a wide historical, urban planning, and regional maps, as well as numerous illustrations, to show how the city was born, grew, and changed over the last three decades.

Boston in Transit is an encyclopedic history of public transportation infrastructure and modes of transit that have moved Boston from 1630 until today.

Carving Nature at its Joints? In order to map the future of biology we need to understand where we are and how we got there. Present day biology is the realization of the famous metaphor of the organism as a *bete ^ machine* elaborated by Descartes in Part V of the *Discours*, a realization far beyond what anyone in the seventeenth century could have imagined. Until the middle of the nineteenth century that machine was an articulated collection of macroscopic parts, a system of gears and levers moving gasses, solids, and liquids, and causing some parts of the machine to move in response to the force produced by others. Then, in the nineteenth century, two divergent changes occurred in the level at which the living machine came to be investigated. First, with the rise of chemistry and the particulate view of the composition of matter, the forces on macroscopic machine came to be understood as the manifestation of molecular events, and functional biology became a study of molecular interactions. That is, the machine ceased to be a clock or a water pump and became an articulated network of chemical reactions. Until the first third of the twentieth century this chemical view of life, as reflected in the development of classical biochemistry treated the chemistry of biological molecules in much the same way as for any organic chemical reaction, with reaction rates and side products that were the consequence of statistical properties of the concentrations of reactants.

Why and how Boston was transformed by landmaking.

Mapping Cities charts both the development of urban planning in seven cities -- Jerusalem, Rome, Paris, Amsterdam, London, Boston, and New York -- and changes in mapmaking since the 15th century. Despite the ubiquity of city maps, urban cartography is a relatively recent discipline, quite distinct from the field of urban history. This book emphasizes the city map as a bearer of information and a graphic means of communication. It illustrates several little-known maps, including a never before published 1598 map of Jerusalem, an 1858 lithograph of New York in an orb, and a poster for the Tate Gallery advertising the London transport system. Also included are acknowledged landmarks such as Nolli's 1748 map of Rome, the Turgot map of Paris featuring detailed images of 18th-century Parisian life, and the McIntyre map of Boston.

This enthralling and beautiful book tells the story of one of America's most important Protestant churches.

Mapping Human and Natural Systems covers our increasingly digital world - internet communications, cloud computing, etc., and how our ability to quickly and visually communicate is becoming increasingly important. The book provides the reader with a ready reference to learn about map creation and interpretation and to help them better interact with, and construct, maps. There are several software systems available that focus on maps and mapping, but no single resource that covers the fundamentals of mapping. This book fills that need. Presents unique reflections, diversions, inspections and translations to encourage critical thinking skills Includes a companion site to enhance the reflections, diversions, inspections and translations with additional resources Provides examples and discussions from seasoned natural resource professionals with over 80 years of combined professional experience

This edited collection provides an introduction to the emerging interdisciplinary field of cultural mapping, offering a range of perspectives that are international in scope. Cultural mapping is a mode of inquiry and a methodological tool in urban planning, cultural sustainability, and community development that makes visible the ways local stories, practices, relationships, memories, and rituals constitute places as meaningful locations. The chapters address themes, processes, approaches, and research methodologies drawn from examples in Australia, Canada, Estonia, the United Kingdom, Egypt, Italy, Malaysia, Malta, Palestine, Portugal, Singapore, Sweden, Syria, the United Arab Emirates, the United States, and Ukraine. Contributors explore innovative ways to encourage urban and cultural planning, community development, artistic intervention, and public participation in cultural mapping—recognizing that public involvement and artistic practices introduce a range of challenges spanning various phases of the research process, from the gathering of data, to interpreting data, to presenting "findings" to a broad range of audiences. The book responds to the need for histories and case studies of cultural mapping that are globally distributed and that situate the practice locally, regionally, nationally, and internationally.
