This book presents all the publicly available questions from the PISA surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment.

Assesses the level of investment required to bring all of our nation's public transportation (transit) systems into a state of good repair. While the seven agencies included in the 2009 Rail Modernization Study are responsible for a majority of the nation's transit assets, the Study's findings emphasize the need for a more comprehensive understanding of transit reinvestment needs. This 2010 National State of Good Repair Assessment evaluates the level of investment required to bring all U.S. transit assets to a state of good repair. The current national SGR backlog is about \$77.7 billion. An annual average of \$14.4 billion in normal replacement expenditures would be required to keep that backlog from getting larger. Charts and tables.

The Revenue Equipment Maintainer Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: electronic and electrical theory; electronic and mechanical equipment, and related tools and devices; understanding schematics; workplace safety and first aid; and more.

This research is designed to support FTA in its efforts to disseminate knowledge of new technologies within the transit community, in this case focusing on issues associated with automated fare collection (AFC) for commuter rail. By identifying "lessons learned" with AFC deployments, the report is also intended as a resource for commuter railroads considering adoption of AFC and/or joining multimodal electronic payment systems. The findings may be of particular use for commuter rail systems that are still in the planning stages and have the opportunity to leapfrog older technologies.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

TCRP report 155 provides guidelines and descriptions for the design of various common types of light rail transit (LRT) track. The track structure types include ballasted track, direct fixation ("ballastless") track, and embedded track. The report considers the characteristics and interfaces of vehicle wheels and rail, tracks and wheel gauges, rail sections, alignments, speeds, and track moduli. The report includes chapters on vehicles, alignment, track structures, track components, special track work, aerial structures/bridges, corrosion control, noise and vibration, signals, traction power, and the integration of LRT track into urban streets.

Covers hiring procedures in every major U.S. city and includes three complete practice exams with answer explanations
