Focuses on the aim to develop software tools to assist users in constructing and evaluating arguments and counterarguments and/or to develop automated systems for constructing and evaluating arguments and counterarguments. This book includes articles, which provide a snapshot of research questions in the area of computational models of argument.

Is conversational Spanish turning a little too tricky for you? Do you have no idea on how to order a meal or book a room at a hotel? If your answer to any of the previous questions was 'Yes!', then this book is for you! If there's even been something tougher than learning the grammar rules of a new language, it's finding the way to speak with other people in that tongue. Any student knows this - we can try our best at practicing, but you always want to avoid making embarrassing mistakes or not getting your message through correctly. How do I get out of this situation? many students ask themselves, to no avail, but no answer is forthcoming. Until now. We have compiled MORE THAN ONE HUNDRED Spanish Stories for Beginners along with their translations, allowing new Spanish speakers to have the necessary tools to begin studying how to set a meeting, rent a car or tell a doctor that they don't feel well! We're not wasting time here with conversations that don't go anywhere: if you want to know how to solve problems (while learning a ton of Spanish along the way, obviously), this book is for you! How Conversational Spanish Dialogues works: Each new chapter will have a fresh, new story between two people who wish to solve a common, day-to-day issue that you will surely encounter in real life. A Spanish version of the conversation will take place first, followed by an English translation. This ensures that you fully understood just what it was that they were saying! Before and after the main section of the book, we shall provide you with an introduction and conclusion that will offer you important strategies, tips and tricks to allow you to get the absolute most out of this learning material. That's about it! Simple, useful and incredibly helpful; you will NOT need another conversational Spanish book once you have begun reading and studying this one! We want you to feel comfortable while learning the tongue; after all, no language should be a barrier for you to travel around the world and expand your social circles! So look no further! Pick up your copy of Conversational Spanish Dialogues and start learning Spanish right now!

The two LNCS volume set 9193-9194 constitutes the refereed proceedings of the First International Conference on Human Aspects of IT for the Aged Population, ITAP 2015, held as part of the 17th International Conference on Human-Computer Interaction, HCI 2015, held in Los Angeles, CA, USA, in August 2015, jointly with 15 other thematically conferences. The total of 1462 papers and 246 posters presented at the HCI 2015 conferences were carefully reviewed and selected from 4843 submissions. These papers of the two volume set address as follows: LNCS 9193, Design for Aging (Part I), addressing the following major topics: HCI design and evaluation methods for the elderly; ICT use and acceptance; aging, the web and social media; and the elderly and mobile devices and LNCS 9194, Design for Everyday Life (Part II), addressing the following major topics: health care technologies and services for the elderly; home and work support; smart environment and AAL; and communication, games, and entertainment.

This book constitutes the refereed proceedings of the 10th European Conference on Symbolic and Quantitative Approaches to Reasoning with Uncertainty, ECSQARU 2009, held in Verona, Italy, July 1-3, 2009. There are 76 revised full papers presented together with 3 invited lectures by three outstanding researchers in the area. All papers were carefully reviewed and selected from 118 submissions for inclusion in the book. The papers are organized in topical sections on algorithms for uncertain inference, argumentation systems, Bayesian networks, Belief functions, Belief revision and inconsistency handling, classification and clustering, conditioning, independence, inference, default reasoning, foundations of reasoning, decision making under uncertainty, Fuzzy sets and Fuzzy logic, implementation and application of uncertain systems, logics for reasoning under uncertainty, Markov decision process, and Mathematical Fuzzy Logic.

Thesis (M.A.) from the year 2006 in the subject Computer Science - Miscellaneous, grade: 1,1, University of Heidelberg (Seminar für Computerlinguistik; Institut für allgemeine und angewandte Sprachwissenschaft), 64 entries in the bibliography, language: English, abstract: In these days our daily life is more and more affected by computers, chips, electronic equipment, et cetera. Owing to this increase of technology, even in common everyday objects, like for example a fridge, it is necessary to find a simple and intuitive way to interact with complex technology. Natural language dialog systems could be the solution, or at least a part of it, how humans and machines could communicate or interact with each other. With the help of dialog systems people could access information and technical functionality of computers in a natural way using linguistic in- and output. One of the main tasks of such dialog systems is to provide fast and appropriate answers to user's questions or requests. The challenge, therein, is how do we find these answers out of the flood of information.

User models have recently attracted much research interest in the field of artificial intelligence dialog systems. It has become evident that flexible user-oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his/her background knowledge as well as his/her goals and plans in consulting the system. Research in the field of user models investigates how such assumptions can be automatically created, represented and exploited by the system in the course of an "on-line" interaction with the user. The communication medium in this interaction need not necessarily be a natural language, such as English or German. Formal interaction languages are also permit ted. The emphasis is placed on systems with natural language input and output, however. A dozen major and several more minor user modeling systems have been designed and implemented in the last decade, mostly in the context of natural-language dialog systems. The goal of UM86, the first international workshop on user modeling, was to bring together the researchers working on these projects so that results could be discussed and analyzed, and hopefully general insights be found, that could prove useful for future research. The meeting took place in Maria Laach, a small village some 40 miles south of Bonn, West Germany. 25 prominent researchers were invited to participate.

"Dan Frakes' Mac OS X Power Tools is an essential (and approachable) guide for getting the most from Mac OS X." (Christopher Breen, Mac OS X (v10.3, Panther) is here, and noted expert Dan Frakes has once again worked day and night to discover and document the best ways for Mac users of all levels of experience to get things done. This completely revised and updated second edition of Mac OS X Power Tools provides tips, shortcuts, and step-by-step solutions to equip you with the most essential insights and knowledge. With this book at your side and your Mac in front of you, you'll understand Mac OS X like never before, saving time, avoiding headaches, and transforming OS X into one very productive cat. Coverage includes: Understanding user accounts and permissions Taking control of the startup and login processes Embracing and extending Finder functionality Using the Dock and Dock replacements Working with applications Streamlining Mac OS and third-party installations Making the most of Classic Improving Web surfing and network connectivity Sharing files and connecting to servers Taking advantage of OS X's advanced printing architecture Strengthening system security Keeping Mac OS X in tip-top shape Controlling your Mac remotely Taking advantage of OS X's Unix base Visit the author's website at www.macosxpowertools.com/

Increasingly, medical students are required to face up to ethical issues in their training and practice. At the same time, there is growing interest in philosophy courses in the ethical issues raised by medical practice. This textbook, designed primarily for students of medicine, develops the issues to a philosophical level complex enough to be satisfying to students of philosophy as well as MA students on applied ethics courses. The author advocates an approach to medical ethics which breaks out of the straitjacket of the narrow choice between utilitarian or deontological theory, and contains a valuable discussion of practical wisdom. It maintains a balance between case studies and philosophical arguments - which are developed in a historical context, and will be of interest at all levels of the medical profession.
