Here’s instant access to the symptoms, signs, differential diagnosis, and treatment for the full range of liver disorders. Written by an international 'who's who' of hepatology-and now in full color-this new 2nd Edition provides readers with top-notch, authoritative guidance they can count on! Discusses the hottest topics in the field, such as non-alcoholic steatohepatitis (NASH) and the latest information on liver transplantation. Includes expanded coverage of chronic hepatitis C, most notably the use of combination therapy with peginterferon and ribavirin and improvements in the management of the side effects of antiviral therapy. Offers the most recent therapeutic options for the management of chronic hepatitis B and advances in the understanding of the molecular biology of this virus. Updates the approach to the diagnosis of many liver diseases due to newer tests based on molecular techniques and advances in imaging. Features over 340 full-color illustrations. Uses a redesigned template, outline format that makes reference a snap. Presents a concise, in-depth clinical summary-in an outline format-of the current practice of hepatology for each major disease entity. Provides a liberal use of tables, algorithms, and figures, rendering complex concepts understandable. Includes key point boxes at the beginning of each chapter, providing at-a-glance access to vital information. Includes alert symbols that highlight information that's critical to patient safety.

The spectrum and etiology of liver diseases vary widely between East and West and hence the focus and experience of hepatologists also remain varied at two corners of the globe. Hepatology being perhaps one of the most flourishing and evolving discipline of medical sciences, a book with recent information written by experts from all over the world was much needed. The present book fulfills this need. The book will serve as a useful reference manual to consultants, postgraduate students, and residents of Hepatology, Gastroenterology, Internal Medicine, Pathology, Virology, and Preventive Medicine as well as undergraduate clinical medical students. Liver is a comprehensive book that discusses all aspects of diseases ranging from epidemiology to prognosis. This book is unique in its conception and presentation, as not only it provides new information but also offers a balanced and rational approach to diseases of liver, pancreas, and biliary system. One of the characteristic features of the book is inclusion of diseases of pancreas and separate chapters on important topics like cytokines and chemokines and apoptosis in liver diseases, as a sound background in these is essential for becoming a good specialist. It contains a chapter on evidence-based clinical practice in hepatology, which is the basis of modern clinical practice. It also includes a chapter on preventive aspects of hepato-biliary diseases keeping in mind that prevention of diseases is always preferred to cure. One of the unique features of this book is, it has contributors from all over the world.

The field of hepatology is full of controversies and clinical dilemmas. Each day, gastroenterologists and hepatologists are faced with the challenge of making the best evidence-based decision in challenging cases that do not readily lend themselves to an easy answer, even with today’s available medical literature. Controversies in Hepatology: The Experts Analyze Both Sides is based on the principle of an academic debate. Dr. Donald Jensen is joined by 50 colleagues who present evidence-based arguments for and against 17 key controversial areas in hepatology. Each point-counterpoint is then followed up by a summarization of key points by a leading expert in that topic area. Some Chapter Topics Include: • Should living donor liver transplantation be considered in adult acute liver failure? • Should hepatitis C be treated in patients with chronic kidney disease prior to kidney transplant? • Resect or observe asymptomatic hepatic adenoma? • Strictly adhere to the “6-month rule” for recent history of alcohol abuse in potential liver transplant candidates? • Autoimmune hepatitis: maintenance therapy for all patients or stop treatment after histologic remission? With concise clinical information to reinforce the point-counterpoint text, Controversies in Hepatology: The Experts Analyze Both Sides will become the go-to resource for teaching and perfecting the important skills required to weigh the evidence and arrive at an outcome.

The authoritative guide for dietetic students and both new and experienced dietitians – endorsed by the British Dietetic Association Now in its sixth edition, the bestselling Manual of Dietetic Practice has been thoroughly revised and updated to include the most recent developments and research on the topic. Published on behalf of the British Dietetic Association, this comprehensive resource covers the entire dietetics curriculum, and is an ideal reference text for healthcare professionals to develop their expertise and specialist skills in the realm of dietetic practice. This important guide includes: The latest developments and scientific evidence in the field New data on nutrition and health surveillance programs Revised and updated evidence-based guidelines for dietetic practice An exploration of how Public Health England has influenced the field Practical advice on public health interventions and monitoring A companion website with helpful materials to support and develop learning Written for dietitians, clinical nutritionists, and other healthcare professionals by leading dietitians and other professionals, the Manual of Dietetic Practice continues to provide a crucial resource for experts and novices alike.

Explains how nutritional supplements can reduce the risk of eye disease.

Compact, yet comprehensive. Manual of Critical Care Nursing: Interprofessional Collaborative Management, 8th Edition is the go-to-reference for helping you provide safe, high-quality nursing care in critical care settings. Written in an abbreviated outline format, it presents essential information on more than 75 disorders and conditions, as well as concepts relevant to caring for critically ill patients and functioning in the critical care environment. Award-winning clinical nurse specialist Mariame Baird separates the content first by body system and then by disorder, with each disorder including a brief description of pathophysiology, assessment, diagnostic testing, collaborative management, nursing diagnoses, desired outcomes, nursing interventions, and patient teaching and rehabilitation. Coverage of more than 75 disorders most commonly seen in progressive and critical care settings equips you with all the content needed to handle problems in critical care nursing. Consistent, easy-to-use format mirrors a practicing nurse’s approach to patient care and facilitates quick reference to vital information. Diagnostic Tests tables highlight the definition, purpose, and abnormal findings for each test. Gerontologic considerations and bariatric considerations are highlighted throughout to direct attention to patients with unique needs in critical care settings. NOC outcomes and NIC interventions apply standardized nursing taxonomies to the disorders and conditions most commonly encountered in progressive and critical care settings. Portable size makes it ideal for use on the unit or at the bedside. Safety Alert! and High Alert! boxes call attention to issues vital to patient safety. NEW! Focused content and a more streamlined, quick-reference format emphasize generic “patient problems” language in lieu of nursing-specific diagnoses to promote interprofessional collaboration and improved communication facilitated by a shared language. UPDATED! Comprehensive coverage reflects the latest evidence-based practice and national and international treatment guidelines. NEW and UNIQUE! Coverage of interprofessional collaborative management includes Interprofessional Collaborative Management headings and tables that concisely summarize relevant performance measures while incorporating the best available patient care guidelines. NEW! Enhanced focus on need-to-know content facilitates quicker information retrieval in time-sensitive high acuity, progressive, and critical care settings.

Take charge of your learning with this comprehensive lab manual and student workbook. Activities and resources include learning objectives, chapter reviews, multiple-choice questions, terminology reviews, application activities, case studies, and critical thinking questions. Answers at the back facilitate both learning and review. The new edition offers expanded application activities and an emphasis on evidence-based practice. A comprehensive revision of terminology review, critical thinking exercises and application exercises aids studying. Practice questions are revised from knowledge and comprehension to application, analysis, and evaluation.

This book provides a comprehensive overview of the diagnosis and management of Non-alcoholic Fatty Liver Disease (NAFLD) and Non-Alcoholic Steatohepatitis (NASH). Basic principles of disease progression, the genetic and nutritional basis of NAFLD and NASH are explained along with the proteomic principles underlying biomarker development. Chapters cover both biochemical and imaging biomarkers used in elastography and ultrasound and discuss how these are applicable to early diagnosis and monitoring of NASH and NAFLD. This is a useful resource for hepatologists, primary care providers with an interest in metabolic disease, diabetologists and endocrinologists in their daily clinical practice.

Autophagy in Current Trends in Cellular Physiology and Pathology is addressed to one of the fundamental molecular mechanisms - autophagy- evolutionarily adopted by cells for processing of unnecessary or malfunctioned constituents and shaping intracellular structures, adjusting them to environmental conditions, aging, disease, neoplasia, and damages over their life period. Particular attention is paid to autophagy-mediated barrier processes of selective sequestration and recycling of impaired organelles and degradation of invading microorganisms, that is, the processes sustaining intrinsic resistance to stress, tissue degeneration, toxic exposures, and infections. The presented topics encompass personal experience and visions of the chapter contributors and the editors; the book chapters include a broad analysis of literature on biology of autophagy.

This book emphasizes the clinical epidemiology of chronic liver diseases with a specific focus on the methodology of the discussed studies. The whole spectrum of liver diseases is covered, from chronic hepatitis B and C, to hepatocellular carcinoma, alcoholic and non-alcoholic fatty liver diseases and autoimmune and cholestatic liver diseases. Readers will find the most up-to-date information on clinical epidemiology of hepatology, and will also be able to learn about important methodology and biostatistics information. Each chapter contains a summary table at the end of each chapter that highlights the most relevant landmark studies, their main outcomes and the unique features of the methodology. The book will appeal to both practicing clinicians as well as clinical research investigators. In addition, this would likely be of interest to medical school or public health school students to learn about hepatology epidemiology, but also some specific fundamentals of clinical research and clinical epidemiology.
