In May 1993 the British Mountaineering Council met to discuss the future of high altitude tourism. Of concern to attendees were reports of queues on Everest and reference was made to mountaineer Peter Boardman calling Everest an llamphitheater of the ego!. Issues raised included environmental and social responsibility and regulations to minimize impacts. In the years that have followed there has been a surge of interest in climbing Everest, with one day in 2012 seeing 234 climbers reach the summit. Participation in mountaineering tourism has surely escalated beyond the imagination of those who attended the meeting 20 years ago. This book provides a critical and comprehensive analysis of all pertinent aspects and issues related to the development and the management of the growth area of mountaineering tourism. By doing so it explores the meaning of adventure and special reference to mountain-based adventure, the delivering of adventure experience and adventure learning and education. It further introduces examples of settings (alpine environments) where a general management framework could be applied as a baseline approach in mountaineering tourism development. Along with this general management framework, the book draws evidence from case studies derived from various mountaineering tourism development contexts worldwide, to highlight the diversity and uniqueness of management approaches, policies and practices. Written by leading academics from a range of disciplinary backgrounds, this insightful book will provide students, researchers and academics with a better understanding of the unique aspects of tourism management and development of this growing form of adventure tourism across the world.

"Oceania: A Tourism Handbook draws together a wide range of sources to provide a comprehensive handbook of tourism in the Oceania region. As tourism continues to grow in importance and significance for the countries of Oceania, it is important to have a single source of information and reference for tourism. At the same time, it is vital to provide a disciplined analysis of tourism by standardising terminologies and delivering a consistency of approach for all the countries in the region." "The handbook provides an anatomy of tourism in the region by taking a detailed look at each of the three key constituents of Oceania - Australia, New Zealand and the Pacific Islands. For each of these regions, tourism demand, supply and organisation have been analysed, as well as a chapter to guide the reader through the tourism statistics sources that are available. The final section of the handbook takes a thematic approach with chapters examining key issues of tourism in the region, including investment, air transport, risk management, land ownership, climate change and tourism education."--BOOK JACKET.

* For climbers who know the basics and are ready to venture at higher altitudes* Written by longtime guides and climbing instructors certified by the American Mountain Guide Association (AMGA)* Teaches situational thinking and learning as well as techniqueThis intermediate-level guide addresses tools, skills, and techniques used in alpine terrain including rock, snow, ice, and glaciers at moderate altitude - approximately 5000 meters (16,000 feet) and lower. The technical protection systems are covered, of course. But 30 years of alpine climbing experience has convinced the authors that mastery - and safety - lie in the far more difficult task of knowing exactly which techniques to use, where and when. Therefore, they teach step-by-step decision-making skills, providing scenarios, checklists, and self-posed questions to inform the decision process. Alpine Climbing assumes some prior knowledge, primarily in rock climbing skills and techniques. Basic knots, belaying, rappelling, building rock anchors, leading, placing rock protection, and movement skills on rock: variations of these skills that are of particular value in the alpine environment are addressed in this book.

Adventure tourism is a new, rapidly growing area at both practical and academic levels. Written at an introductory level, Adventure Tourism provides a basic background and covers commercial adventure tourism products across a range of adventure tourism sectors.
