Organic chemists use a curved arrow (\curvearrowright) to show the movement of an electron pair. A σ bond is formed between atoms by the overlap of two atomic orbitals along the line that connects the atoms. Carbon uses sp^3 -hybridized orbitals to form four such bonds. These bonds are directed from the carbon nucleus toward the corners of a tetrahedron.

Organic Chemistry is unusual among market-leading texts; it exists only as a brief text and is specifically designed for a one-semester short course in organic chemistry. Its heavy emphasis on applications,

increased coverage of basic concepts, thorough problem-solving pedagogy, and comprehensive problem sets address the specific needs of students in this course. "A Closer Look At" features require students to use resources on the Web to expand concepts in the text, applying text content more directly to real-world examples. The HM ClassPrep instructor CD-ROM provides valuable supplemental content in one convenient, portable product. The CD-ROM includes a test bank, Instructor's Resource Manual, and PowerPoint slides of all line art from the text and animations from the student CD-ROM.

The only textbook designed specifically for the one-semester short course in organic chemistry, this market leader appeals to a range of non-chemistry science majors through its emphasis on practical, real-life applications, coverage of basic concepts, and engaging visual style. In contrast to other texts for the course that are streamlined versions of full-year texts, this text was created from the ground up to offer a writing style, approach, and selection of topics that uniquely meet the needs of the short course. The Thirteenth Edition builds on the strengths of previous editions through an updated, dynamic art program—online, on CD, and in the text—new content that keeps students current with developments in the organic chemistry field, and a revised lab manual.

Aimed at the single semester organic chemistry course, this text emphasizes understanding rather than memorization, focusing on the mechanisms by which organic reactions take place.
