Pain Medicine Board Review is a comprehensive guide for preparing for the American Board of Medical Specialties (ABMS) certification or recertification in Pain Medicine, and for residents preparing for in-training examinations in Pain Medicine. The text is organized into 28 chapters covering topics such as Anatomy, Physiology of Pain, Pharmacology, Diagnosis of Pain, and various pain syndromes. Each section includes questions, answers, and detailed explanations with highlighted key points, and concise further reading lists. Questions follow the ABMS style, and the explications of answers carefully address all points in the ABMS content outline for Pain Medicine. A section on imaging includes high quality magnetic resonance images, ultrasound images, fluoroscopic images and other images that will enable the examination candidate to answer questions that determine knowledge of pathological states as compared to normal and complications of treatments.

We live in a world defined by cultural diversity, and, thus, multicultural experiences and identities have become a regular component of many individuals' lives. The Oxford Handbook of Multicultural Identity: Basic and Applied Psychological Perspectives, which consists of 22 chapters written by some of the most accomplished scholars on the topic, reviews cutting-edge empirical and theoretical work on the psychology of multicultural identities and experiences (and related topics such as acculturation, globalization, intercultural relations, etc.). The chapters are organized into six thematic groupings: Definitional Issues and Basic Processes (Part I); The Social-Psychological Context (Part II); Measurement and Validity Issues (Part III); Individual Differences (Part IV); Developmental, Educational, and Counseling Issues (Part V); and Applied Perspectives (Part VI). As a whole, the volume addresses some important basic issues (e.g., measurement of multicultural identity, links between multilingualism and multiculturalism, psychological reactions to globalization) and also applied ones (e.g., how to address multiculturalism in marketing and organizational science), and reviews relevant research from diverse traditions within psychology (i.e., social, personality, developmental, acculturation, educational, political) and managerial sciences (i.e., organizational, marketing). The progression of chapters weaves a coherent tapestry of all that is relevant to the psychological study of multiculturalism and intercultural relations.--

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The study of how the environment, local geography, and physical locations influence crime has a long history that stretches across many research traditions. These include the neighborhood effects approach developed in the 1920s, the criminology of place, and a newer approach that attends to the perception of crime in communities. Aided by new technologies and improved data-reporting in recent decades, research in environmental criminology has developed rapidly within each of these approaches. Yet research in the subfield remains fragmented and competing theories are rarely examined together. The Oxford Handbook of Environmental Criminology takes a unique approach and synthesizes the contributions of existing methods to better integrate the subfield as a whole. Gerben J.N. Bruinsma and Shane D. Johnson have assembled a cast of top scholars to provide an in-depth source for understanding how and why physical setting can influence the emergence of crime, affect the environment, and impact individual or group behavior. The contributors address how changes in the environment, global connectivity, and technology provide more criminal opportunities and new ways of committing old crimes. They also explore how crimes committed in countries with distinct cultural practices like China and West Africa might lead to different spatial patterns of crime. This is a state-of-the-art compendium on environmental criminology that reflects the diverse research and theory developed across the western world.

Organic synthesis is essential to creating new materials. While synthetic design has reached a high level of sophistication, many details remain unplannable. To become proficient in organic synthesis, one must study case histories in the same way as a lawyer does. Attention must be paid to overcoming stumbling blocks as one prepares himself to meet future challenges of similar kinds. This book discusses many important syntheses, with emphasis on the need for detours and ways leading back to the main pathways. It thus focuses on one of the most important aspects of organic synthesis, which virtually none of the synoptic literature addresses.
