Physical Exercise Combined With CPAP in Subjects Who Underwent Surgical Myocardial Revascularization: A Randomized Clinical Trial

Lays the foundation for problem solving by integrating physiology and practice. The majority of the book is then devoted to physiotherapy management and its rationale. It specifically addresses the problems of patients with breathlessness, those undergoing surgery or in intensive care, the elderly and children. Pulmonary rehabilitation and home management reflect changing policies in health care. Advice on emergencies and on-calls is given with flow charts to assist decision making. Physiological reasoning, outcome measures, and critical review are themes throughout, and the book concludes with an evaluation of respiratory physiotherapy.

Respiratory care is an immensely satisfying branch of physiotherapy. It challenges our intellect, exploits our handling skills and employs our humanity to the full. Respiratory physiotherapy is both art and science. It is not an exact science, and effective treatment therefore depends on problem-solving. Analytic problem-solving requires the ability to define a problem and the knowledge to address it. Creative problem-solving requires a clear perspective of the individual patient's need. These are the aims of this book. Clinicians now expect explanations that are referenced and physiologically sound, meticulous attention to detail of technique and a patient-centred approach. This book is written for such readers and those who question and traditional rituals. fundamental assumptions Evaluation of practice is emphasized so that we are equipped to justify our protocol to ourselves and others. Carefully reasoned explanations and updated physiotherapy techniques are covered in precise detail. There is integration of theory and practice and emphasis on the hands-on aspect of physiotherapy. The glossary serves as a quick reference guide and an explanation of abbreviations, which are usually defined once only in the text. It has been greatly extended for the second edition and can be read in its own right as an extra physiology chapter. The text is enthusiastically written, highly readable and enlivened by quotations from patients whose experiences are a central theme throughout.

The latest edition of this must-have text book promises an evidence-based and practical approach covering the very latest in cardiorespiratory care. The textbook covers a wide range of cardiorespiratory conditions and discusses treatment of patients in different clinical settings such as critical care, the ward area and out-patient departments. It begins with physiology and pathology and progresses into a detailed patient assessment section and a discussion of specific respiratory and cardiac conditions. The final section covers different groups of people who may require physiotherapy such as infants, children, and adults with specific conditions including a considered section on palliative care. Critical thinking is facilitated
