Biochemistry Laboratory Manual

Chemistry Practical Handbook This Practical Handbook has been introduced with the aim of providing the teachers with necessary guidance for planning practical activities, engaging students effectively in the teaching learning process and to promote students' practical skills in the discipline of chemistry.

This reference manual contains information on the most suitable procedures for the analysis of agricultural materials. It describes the analysis of soils and composts, plant materials, feeds, plant components (e.g. cellulose, lignin, trace elements), fertilizers, and biological substances. The book is designed as a laboratory sourcebook, complete with useful Internet addresses, and contains over 60 different practical methods. Each method is described by a step-by-step approach, and contains details of apparatus required, chemical reaction equations, formulae and calculations, and meticulous descriptions of experimental results. Most methods use standard equipment and instruments commonly found in the practical lab. The aim is that scientists with little experience in analytical techniques should be able to safely carry out these procedures and obtain acceptable results.

Excerpt from Laboratory Manual of Agricultural Chemistry A normal solution is one which contains the hydrogen equivalent of the active constituent in grams per liter; that is, the amount in a liter which brings into reaction g. Of hydrogen or 8 g. Of oxygen, or their equivalent. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
